DECEMBER 31, 1910

Director,
GEORGE R. STEARNS.

Assistant Director,
WILLIAM R. KNIGHT, JR.

Chief Clerk—Willis Sheble.
Clerk—Ernest T. Hanefeld.
Assistant Clerk—Andrew L. Teamer.
Stenographer and Clerk—Harry A. Stoy.
Stenographer and Typewriter—Joseph B. Smarr.
Special Inspector—Elvin S. Rodgers.
General Inspector—Robert C. Hicks.
Official Photographer—Lewis R. Snow.
Assistant Official Photographer—William Shane.
Chauffeur—John Hanahan.
Chauffeur—Thomas McKeever.
Office Boy—Archibald Frederick.
Messenger—J. Jarriatte Johnston.

CHIEFS OF BUREAUS.

Gas—Dr. N. Wiley Thomas.
Highways—Street Cleaning—William R. Benson.
Lighting—John J. Kirk.
Surveys—George S. Webster.
Water—Filtration—Fred. C. Dunlap.

Summary of Appropriations, Expenditures, Receipts, etc., of the Department of Public Works during the year 1910, and Totals for the years 1907, 1908 and 1909.

† Included in the appropriation and in the expenditures of Bureau of Surveys.

NOTE.—The above statement does not include expenditures made by Department of Supplies for material and supplies for Department of Public Works.

TWENTY-FOURTH ANNUAL REPORT

OF THE

DEPARTMENT OF PUBLIC WORKS

GEORGE R. STEARNS, Director

Philadelphia, January 3, 1911.

HON. JOHN E. REYBURN,
Mayor of Philadelphia.

DEAR SIR:—I beg to submit herewith report of the Department of Public Works for the year ending December 31, 1910—the Twenty-fourth Annual Report of the Department.

All details of operations, etc., will be found in the exhaustive reports of the Chiefs of the several Bureaus of the Department, which are attached hereto.

Appropriations.

The net amount of money available during the year was $14,551,417.21, of which $9,149,871.76 was derived from loans and $5,401,545.45 from direct taxation.

Expenditures.

The expenditures during the year amounted to $8,931,735.96, of which $5,104,714.86 was for maintenance and current expenses and $3,827,021.10 for extensions and improvements.

Receipts.

The total receipts were $4,818,237.55, an increase over 1909 of $114,516.64. I would call your attention to the fact that the receipts for the four years of this administration have been $18,435,046.32, which is an increase over the previous four years of $1,814,843.57.

Bureau of Gas.

The report of the Chief Inspector of Meters indicates that the officials of the Bureau of Gas still exercise close supervision over the quality of gas furnished by The United Gas Improvement Company.

Complaints.

The complaints against the service rendered by The United Gas Improvement Company, lessees of the Philadelphia Gas Works, have been so few they are scarcely worth noting.

Photometrical tests.

The daily photometrical tests of the gas furnished at the Gas Testing Stations show the following results:

Month.	Candle Power.
January	22.64
February	22.60
March	22.57
April	22.55
May	22.53
June	22.55
July	22.47
August	22.64
September	22.58
October	22.68
November	22.50
December	22.54
Maximum monthly average	22.78
Minimum monthly average	22.51

Chemical tests.

The following table gives the average monthly chemical composition of the gas furnished:

Carbon dioxide	3.76%
Illuminants	12.28
Oxygen	0.51
Carbon monoxide	25.56
Hydrogen	36.30
Methane	20.82
Nitrogen	0.77
	100.00%

Bureau of Lighting.

The total appropriation to the Bureau of Lighting during the year was $491,779.00, of which $490,762.24 was expended, $11.46 carried forward to 1911 and $1,005.20 merged into the City Treasury.

Lamps maintained.

The following table shows the total number of lamps maintained and under the supervision of the Bureau, together with statement of expenditures:

	1907.		1908.		1909.		1910.	
	Number of lamps.	Cost during the year.	Number of lamps.	Cost during the year.	Number of lamps.	Cost during the year.	Number of lamps.	Cost during the year.
Gas lamps maintained by the United Gas Improvement Co.	22,343	----------	22,913	----------	22,940	----------	23,240	----------
Gasoline lamps	14,432	$380,053 25	16,017	$420,806 81	16,017	$480,029 36	17,223	$478,954 26
Gas lamps supplied by the Northern Liberties Gas Co.	73	1,474 56	73	1,474 56	72	1,454 40	66	1,420 74
Gas lamps maintained by the Bureau of Correction	231	----------	231	----------	231	----------	231	----------
Salaries and office expenses	--------	10,267 38	--------	10,399 04	--------	10,367 13	--------	10,387 34
Totals	37,079	$391,795 19	39,234	$432,680 41	39,260	$491,850 89	40,760	$490,762 34

	1907.	1908.	1909.	1910.
Of the gas lamps maintained by the United Gas Improvement Co. there were not lighted, because of their proximity to electric lights	121	121	121	121
Of the gas lamps maintained by the Department of Charities and Correction there were not lighted, because of their proximity to electric lights	108	108	108	108
	229	229	229	229

Insufficient gas lamps.

It is to be deplored that Councils have not acted upon the recommendations of the Department that some method of relief be adopted whereby the Department would be enabled to furnish lamps on streets where new buildings are being erected, in addition to the 300 lamps per annum required by the terms of the lease of the Philadelphia Gas Works to be erected by the United Gas Improvement Company. The time is rapidly approaching when imperative action will have to be taken on this subject. As conditions are at present, we are constantly importuned by operative builders for more lamps, which we are unable to furnish with any degree of satisfaction to all concerned.

Incandescent gas lighting.

The recommendation of the Chief of the Bureau that the present open-flame gas lamps be replaced by the incandescent mantle has my hearty approval, and if his suggestion could be carried out it would, undoubtedly, result in Philadelphia being the best lighted city in the United States.

Gasoline lamps.

On November 2, 1910, bids were opened for furnishing and lighting naphtha lamps of sixty candle power for the year 1911, and the contract has again been awarded to the Welsbach Street Lighting Company of America—the only bidder—at its bid of $28 per lamp per year, and additional new posts at $7.50 per post, a reduction in price of $1 per lamp per year in comparison with the price paid in 1910, which will result in a saving of over $17,000 for 1911.

Bureau of Highways—Street Cleaning.

Expenditures and receipts.

The expenditures of this Bureau during 1910 aggregated $3,420,890.80, of which $2,745,941.54 were for current expenses and $674,949.26 were for extensions and improvements.

The receipts during the same period were $86,889.70, an increase over 1909 of $23,138.86.

Summary of work done.

Fourteen miles of streets were opened and graded during the year, and in connection with work done by builders at their own expense the total amount of grading amounted to 699,593 cubic yards. More than 25 miles of new streets were paved with asphalt, vitrified fire clay or shale blocks and granite blocks upon a six-inch cement concrete foundation, amounting to 297,823 square yards. The cost of this work approximately $480,000, of which $67,160.33 was paid by the City for paving intersections and in front of unassessable property, the balance being paid by the abutting property owners. Nearly three miles of old streets were repaved with granite blocks, asphalt, vitrified blocks or creosoted wood blocks, upon a six-inch cement concrete foundation, aggregating 69,062 square yards.

Repaving Market street.

The repaving of Market street, from Second street to the Schuylkill river, was completed, the portion done during the year being from Sixteenth street to the bridge over the Schuylkill river.

Maintenance of unpaved and macadamized streets.

The maintenance of unpaved and macadamized public highways during 1910 was conducted in a satisfactory manner, but the limited appropriation at our disposal prevented the doing of much absolutely needed work.

Various experiments have been made with dust-laying preparations with fairly satisfactory results, but the qualities of the preparations experimented with that have brought commendation from motor car owners have produced complaints from drivers of horses and *vice versa*. To avoid these conditions the Department contemplates still further experiments during the coming season.

Repairs to paved streets.

At the beginning of the year the appropriation for repairs to paved streets not occupied by passenger railway tracks was so small that the only work the Department could do was to patch up the most dangerous places, and not until July 29, 1910, did we receive sufficient funds

from Councils to enable us to proceed with this work in a systematic manner.

Railway streets. Bridge and sewer repairs.

The close of the year 1910 found the streets occupied by passenger railway tracks in good, travelable condition.

The value of your plan to have repairs to sewers and bridges of a minor character done by City employes has been amply demonstrated and much good work of a permanent character accomplished.

Northeast Boulevard and improvement of South Broad street.

After due advertisements contracts were entered into for continuing the work on the Northeast Boulevard, and improvement of South Broad street, and operations were vigorously prosecuted during the year.

Parkway.

Temporary improvements were made along the line of the Parkway during the year under review, and we anticipate that 1911 will see active and vigorous work progressing on what is destined to be Philadelphia's Champs-Elysees.

Street cleaning. Garbage.

The report of the Assistant Chief of the Bureau in charge of the Division of Street Cleaning gives an exhaustive resume of the work performed in the cleaning of streets, removal of snow, ashes and collection and disposal of garbage.

The following statement is a classification of the street pavements laid during the year, and their mileage; also, the total mileage of street pavements to December 31, 1910:

Kind of pavements.	Laid during 1910.		Making total in City, December 31, 1910.	
	Sq. yds.	Miles.	Sq. yds.	Miles.
Sheet asphalt	270,712	25.04	7,301,937	473.90

Footways, curb, railroad notices served	22,235	37,210	24,494	17,091

Board of Highway Supervisors.

Expenditures and receipts.

The expenses of the Board of Highway Supervisors aggregated $11,259.73, and there was received and deposited with the Receiver of Taxes for the year 1910 the sum of $11,171.09.

Plans.

Our records were increased by the addition of fifty-nine plans of substructures, and we now have on file 2,123 plans covering 444 miles of streets.

The Chief Draughtsman and his assistants continue to perform the same high-class service as characterized their work of previous years.

Transactions of the Board of Highway Supervisors, 1907, 1908, 1909 and 1910.

*Excess of receipts.

Bureau of Surveys.

The expenditures during the year were $2,237,502.40, of which $340,956.14 was for current expenses and $1,896,546.26 for extensions and improvements; the receipts during the same period were $154,937.20. Expenditures and receipts.

The construction of main sewers was proceeded with as far as the appropriations would permit. It is to be regretted that Councils have not seen fit to provide more liberally for work of this important character. It is a well-known fact that main sewers are the pioneers of interurban development, and the matter of appropriations for this purpose should be given paramount consideration by Councils and money provided without stint. Main sewers.

There were no funds provided during the year 1910 for the construction of branch sewers and inlets, and we were only enabled to carry on work from the small balances of loans brought forward from previous years. However, we were able to construct during the year 11,445 miles of branch sewers at a cost of $317,884.83. Branch sewers and inlets.

The sewer construction during 1910 amounted to 28,765 miles, divided as follows: Mileage of sewers.

Main sewers	2.997 miles
Branch sewers	11.445
Private sewers	11.660
Grade crossing sewers	.673
Boulevard sewers	.513
South Broad street improvement	1.091
Widening Delaware avenue at Vine and South streets	.234
Levick street sewer	.022
Miscellaneous	.130
	28.765 miles

The total length of all sewers constructed to December 31, 1910, is as follows:

Main sewers	185.64 miles
Branch sewers	866.06
Private sewers	153.48
Miscellaneous sewers	20.68
Total	1,225.86 miles

I would again call your attention to the imperative necessity of providing liberally for proper drainage facilities, and it is incomprehensible why Councils should fail to comply with the frequent requests made to them for appropriations for this purpose, especially in view of the fact that for every dollar expended the City receives ample return.

Sewer inspection.

This Department maintained the high standard adopted by this branch of the service in years past, and I have no hesitancy in stating that the rigid inspection to which all sewers and materials entering into their construction are subjected is not surpassed by any other city in this country.

Testing laboratory.

The work performed by the Testing Laboratory of the Bureau of Surveys has given it a national reputation, as is attested by the numerous requests from engineers and technical schools for reports of its operations. The money expended in its maintenance is a distinct saving to the City. The officials of this division are skilled engineers, and the equipment of the laboratory rivals that of any similar institution in the country.

Drainage, South Philadelphia.

This work was conducted to the full extent of the amount available for the purpose. A cursory examination of the report of the Chief Engineer would indicate that the work is extremely costly, but a study of the territory in process of development brings forcibly to mind the splendid investment the City is making in the way of deriving quick returns from increased taxation.

Steady progress has been made on this very important work. Our intercepting sewer systems have a decided bearing in preventing the pollution of our sources of water supply and are extremely essential to the welfare and health of not only those who dwell in our City itself, but to those who are dependent upon either the waters of the Delaware or Schuylkill rivers. Intercepting sewer systems.

After studies made at the Spring Garden Testing Station the Department was enabled to enter into contracts for the construction of sewage disposal plants for City institutions in the vicinity of Torresdale, including the County Prison, the House of Correction and the proposed Home for the Indigent. The land chosen for the disposal works had been acquired for the purposes of water filtration, but a tract of land not needed for future extensions has been utilized for a sewage disposal plant. Sewage disposal.

This is one of the most stupendous problems that confronts all large municipalities, and constant studies are being made in order that the plan adopted by the City of Philadelphia for approval of the State Department of Health may be founded upon the most substantial and scientific principles.

Much work has been accomplished in the construction of new bridges, and a number of sections of the City which had heretofore been inaccessible were brought in close contact with main arteries of travel. Bridges.

After years of agitation, the expenditure of huge sums of money and the solving of many difficult engineering problems, it is my extreme pleasure to state that at the time of writing this report all grade crossings on the Philadelphia, Germantown and Norristown Railroad, between Spring Garden Street and Wayne Junction, have been eliminated. How many lives were lost before this became an accomplished fact would be appalling were it known, Grade crossings.

and the citizens of Philadelphia are to be congratulated upon the rapid completion of this gigantic piece of work. This alone will be a monument to your administration.

Work is proceeding on the Richmond Branch of the Philadelphia and Reading Railway. Retaining walls and abutments are in process of construction, and as soon as the weather will permit the work of street grading, paving, repaving, etc., in connection with the above, will be proceeded with and pushed to completion as rapidly as the elevation of the tracks and construction of bridges over the intersecting streets will permit.

The completed work on Trenton avenue, along the line of the Philadelphia and Trenton Railroad, from Norris to Butler streets, has a total length of about 2.381 miles and has resulted in the elimination of thirty grade crossings in a thickly settled and busy portion of the City.

Future City improvements.

The studies in connection with the improvement of the City plans as outlined in 1907 are still being continued. Upon reading the report of the Chief Engineer of the Bureau of Surveys on this subject, some idea can be gleaned of the difficulty involved in preparing a comprehensive plan, and also an idea of the advantages to be derived if Philadelphia takes a broad view of the responsibilities of the future and places herself in a condition of preparedness for the contest for industrial, commercial and political supremacy of the coming years.

Passyunk bridge.

Work on the present contract for this bridge, which includes the superstructure and the grading and paving of the eastern approach, has made favorable progress, but, as noted in our last report, the bridge will not be available for public travel until Councils provide funds for grading the west approach on Passyunk avenue from the intersection of Sixty-third street. The bridge consists of twelve spans, with a length of 1,330 feet, having a driveway 38

feet wide and each sidewalk nine feet in width. The main span over the channel, which is a vertical opening draw or bascule of two leaves, operating on trunnion bearings 237 feet apart, gives a clear waterway between pier fenders of 200 feet. The draw is now in use and is being operated by electric power.

Chestnut street bridge.

The Department anticipates inviting proposals for the widening of Chestnut Street Bridge over the Schuylkill river early in the current year. Councils by ordinance of July 29, 1910, provided $90,000 to carry on this work, which sum it is believed will be sufficient to cover the cost of widening the bridge proper and the west approach thereto from Thirtieth street, but will not be enough to cover the widening of Chestnut street east of Twenty-fourth street.

Widening Delaware avenue

Favorable progress has been made in connection with the widening of Delaware avenue, from Vine to Green street, in the way of sewer construction and the purchase of property necessary to widen the avenue on the east side between Vine and Callowhill streets. There still being doubt as to the final location of the steam railroad tracks, any paving which has been done at this point is of a temporary character and a concrete base was not used under it.

District surveyors.

The Board held during the year twenty-two stated meetings for the transaction of general business and five special meetings for the purpose of disposing of urgent business or to visit localities where changes of City plan were under consideration.

The following is a summary of the receipts and expenditures of the District Surveyors during the year 1910:

Summary of Receipts and Expenses of District Surveyors for the Year 1910, and Totals for the Years 1907, 1908 and 1909.

Districts.	Surveyors	Cash receipts.	Credit for work done for the City.	Total credit.	Expenses.				Balance profit to the City.	Profit to the City in 1909.	Increase.	Decrease.

Bureau of Water.

Expenditures. The total expenditures of the Bureau of Water during 1910 was $2,734,183.83, of which $1,478,658.25 was for current expenses and $1,255,525.58 for improvements and extensions.

Receipts. The receipts of the Bureau during the same period were $4,576,357.65, an increase over 1909 of $135,783.46. It is gratifying to note that the receipts of this Bureau show a substantial annual increase and are a tribute to excellent business methods which have been adopted and rigidly adhered to by the present Chief of the Bureau.

Water consumption. The consumption of water during the year was 114,730,900,447 gallons, an increase over 1909 of 3,034,723,538 gallons. The average daily consumption was 314,331,234 gallons and the per capita consumption per day averaged 203.2 gallons, an increase over 1909 of six gallons.

Queen Lane filters. It is to be regretted that operations on this very important piece of work were brought to a standstill on December 19, 1910, on account of lack of funds. This is particularly unfortunate, as the work is about 80 per cent. completed, and at the present writing we have no knowledge when operations will be resumed, as the additional appropriation for the completion of the filter plant is embodied in the $8,000,000 loan, which is the subject of litigation.

To obviate the furnishing of raw water to that section which is ultimately to receive its supply of filtered water from the Queen Lane Filters, the Bureau continued the treatment of water from the Queen Lane Reservoirs, which at times is very turbid and unpleasant to use, although reasonably safe, as there has been no increase in typhoid fever resulting therefrom.

The benefits derived from the use of filtered water, insofar as it applies to the much dreaded typhoid fever, is clearly demonstrated by the following figures compiled by the Chief of the Bureau of Water, which show a wonderful decrease as the various filter plants have been put into operation: Typhoid reduction.

Year.	Cases Typhoid Fever.	Deaths from Typhoid Fever.	Tyhoid Fever Death Rate Per 100,000 Population.
1901.....	3,669	444	33.7
1902.....	5,006	588	43.8
1903.....	8,701	957	70.1
1904.....	6,587	744	53.5
1905.....	6,450	684	48.3
1906.....	9,721	1,063	73.8
1907.....	6,762	890	60.6
1908.....	3,502	533	35.7
1909.....	2,336	331	21.8
1910.....	1,745	270	17.4

Of the cases and deaths which resulted from typhoid fever during 1910 fully one-half of the cases were contracted during the vacation period at nearby resorts. Of the total cases reported, 452 were directly traceable to outside causes.

As stated in my report for 1909, it is incumbent upon the authorities to either provide funds for the extension of our present system or adopt some method which will check the excessive waste of water. Careful studies indicate that if the present rate of increase in population continues—as is to be expected—it will require the expenditure of not less than $10,000,000 to provide a future supply of water in the same proportion as is now being furnished. Philadelphia is the only important city in the country that does not sell its water by measurement, and I firmly believe that the general adoption of meters is the only solution of the problem for checking waste. As condi- Future extensions.

tions now exist, the wasteful consumer is charged no more than possibly a half dozen careful, conservative users combined pay for their entire consumption.

Coal Consumption. The total coal consumption during the year was 210,263 tons at a cost of $618,381.25, a decrease over the amount used in 1909 of 4,693 tons and a decrease in cost of $11,523.86. Notwithstanding the lower coal consumption, there were pumped nearly 7,000,000,000 gallons more water than in 1909.

Pumping machinery and boilers. The high degree of efficiency to which the pumping machinery and boilers were brought in 1909 has been maintained, and our plants to-day are in first-class condition and a most valuable asset of the city.

Distribution. There were laid during the year 134,364 feet of new pipe, equal to 25.45 miles, making the total mileage of pipe now in use 1,637.60 miles. Of this amount 14.24 miles were laid during the year by private contract. Seven hundred and twenty-seven new fire hydrants were put in commission during the year, making the total number now in use 16,288. Of these 694 are on the High Pressure Fire Service, under the control of the Bureau of Fire. The total number of dwellings furnished with water is 315,326, an increase of 12,404 during the year.

General. I wish to testify to the high character of the services rendered by the Chief of the Bureau of Water and his able assistants, as it was only by the closest supervision and the exercise of greatest care that the present supply was maintained. A study of the detailed report of the Chief of the Bureau will present many valuable statistics on the advantages of municipal ownership.

Statement of Pumpage for the Years 1907, 1908, 1909 and 1910.

	1907 Gallons.	1908 Gallons.	1909 Gallons.	1910 Gallons.
Pumped to reservoirs	115,882,212,622	160,264,695,178	194,503,704,802	201,437,626,626
Equal to gallons pumped 100 feet high	242,285,589,403	278,534,592,507	313,903,826,387	321,996,695,118

NOTE.—The "pumped to reservoirs" includes 86,499,040,790 gallons repumpage to higher levels at George's Hill, Roxborough, Mt. Airy and Frankford High Service Stations, and also the low service filter beds at the Upper Roxborough and Torresdale filter plants, which, deducted from the total pumped, gives a total pumpage from the rivers of 114,938,385,836 gallons.

The quantity stored in reservoirs on December 31, 1910, was 207,685,389 gallons more than that stored on December 31, 1909. This quantity deducted from the total pumpage from the rivers makes the total consumption for 1910, 114,730,900,447 gallons.

The cost of pumpage is based on the total gallons pumped 100 feet high. The consumption per capita is computed from the average consumption during 1910 of 314,331,234 gallons per day.

	1907—Gallons.	1908—Gallons.	1909—Gallons.	1910—Gallons.
Pumped by water power	8,133,114,825	5,369,821,111	1,048,742,639	180,977,997
Pumped by steam power	108,749,097,797	154,894,874,067	193,454,962,163	201,256,648,629
Largest quantity pumped in twenty-four hours	368,585,438	508,764,869	625,958,908	605,067,632
Smallest quantity pumped in twenty-four hours	199,486,931	329,016,621	287,203,410	480,598,278

	1907.	1908.	1909.	1910.
Average daily consumption	302,436,641	322,043,989	306,016,923	314,331,234
Average consumption per capita per day	201.7	210.2	197.2	203.2
Cost of one million gallons pumped 100 feet high	$5.63	$5.58	$4.43	$4.31
Estimated population	1,449,747	1,531,752	1,552,000	1,549,000

*United States census.

The decreased cost of pumpage per million gallons pumped 100 feet high is 12 cents less than that of the preceding year.

Director's Office.

The work of this office increases from year to year, and the employes are on duty constantly in order to successfully cope with the same.

Official photographer.

The services of the Official Photographer become more valuable each year and are requisitioned by nearly every branch of the City Government. The creation of this office has amply demonstrated its economy, as a substantial saving is made each year.

In concluding this report I wish to express my sincere appreciation of your advice and assistance and to offer my thanks to the Chiefs and employes of the several Bureaus comprising this Department for their loyal support.

Respectfully submitted,

GEORGE R. STEARNS,

Director.

ANNUAL REPORT

OF THE

BUREAU OF WATER

FOR THE YEAR 1910

TWENTY-FOURTH ANNUAL REPORT

OF THE

BUREAU OF WATER

ONE HUNDRED AND NINTH ANNUAL REPORT

OF

OPERATIONS CONNECTED WITH THE CITY WATER SUPPLY

Philadelphia, January 1, 1911.

MR. GEORGE R. STEARNS,

Director, Department of Public Works.

SIR:—I respectfully submit the following report of the work performed by the Bureau of Water during the year ending December 31, 1910:

The past year has again demonstrated the efficiency of the filters. The Bureau has at all times supplied an effluent, not only acceptable to the eye, but also safe to drink, and it was our misfortune that owing to the large territory supplied we were not in all cases able to give all our citizens clean water at a good pressure.

The raw water district outlined in last year's report was continued, and the people living therein were supplied with treated water from the Queen Lane reservoirs, which at times was very turbid and consequently unpleasant to use, although it is reasonably safe, and the records show no increase in typhoid fever in this section.

The Queen Lane filters have been in course of construction for the entire year, and are about 80 per cent. completed. Work on these filters was stopped on December 19, 1910, on account of lack of funds, and it is not known when it will be resumed. This is particularly unfortunate, as at the time filtered water was introduced into the center of the City the district supplied from the Oak Lane reservoir was made as large as possible, and owing to increase in consumption, and the necessity of extending still further the territory to include a portion of the section supplied direct from Lardner's Point on account of lack of pressure in this latter district, the service now rendered those in the Queen Lane district is poor, and will not be improved until the Queen Lane filters are placed in service, as fully half of the present Oak Lane section will then be supplied from Queen Lane.

There are other complications entering into the distribution system which result in the reversal of flow in some of the mains at certain hours, and this often gives a slightly turbid appearance to water which when it left the filters was as clear as crystal.

There is nothing that affects the health and welfare of the people more than their water supply, and if the funds to complete the filters are to be longer in litigation, I would most earnestly recommend that Councils be petitioned to provide funds from the current revenue for the finishing of this work.

The cost of operating the Bureau during the past year

was $2,360,865.00, which includes material furnished by the Supply Department, and represents all the expenses that can be charged to maintenance. This is a decrease of $206,438.42 over the operating expenses of 1909.

Your attention is also called to an increase of $133,920.97 in the receipts of the Bureau over those of 1909, the total receipts being $4,586,884.65. Also, the revenues for this year are $566,065.29 larger than those received in 1907, which increase has been secured by ordinary business methods, and not by an increase in the schedule rates.

The difference between the receipts and the operating expenses is $2,226,019.65, leaving a balance of over $350,000.00 after interest and sinking fund charges on the Filtration and Improvement Loans are paid.

The Bureau is supplying water to 456 premises that the Water Committee of Councils has designated as charitable institutions and subject to a discount of 85 per cent. in their water bills. The total fixture charge on these properties at the schedule rating would amount to $109,908.33, for which the City receives only $16,386.14. This, together with the water furnished without charge to City buildings, and that used for fire extinguishing purposes, represents considerable service for which the Bureau naturally cannot charge, but which is for the benefit of the community, and should be taken into account if a profit and loss balance is made.

The total quantity of water filtered during the year was 98,503,370,000 gallons, an increase of 2,420,000,000 gallons over that of 1909. The total cost, exclusive of pumping, was $210,723.62, or $2.14 per million gallons filtered, of which $0.226 is for laboratory work. The above amount includes $34,550.53 for operating the preliminary filters at Lower Roxborough, Belmont and

Torresdale; the cost for preliminary treatment of 93,435,000,000 gallons of water at these three stations averaged $0.37 per million gallons.

The total cost of filtration, including the Torresdale Pumping Station and the pumpage from the Upper Roxborough reservoir to the Upper Roxborough filters, for the year was $402,270.92, or $4.08 per million gallons filtered, the cost of pumpage at the Torresdale Station being $2.17 per million gallons filtered.

The above noted costs are practically the same as for the previous year.

The Ashbridge Commission, consisting of Messrs. Hering, Wilson and Gray, in reporting upon the extension and improvement of the water supply in September, 1899, stated in their estimates of cost that the "cost of filtration per million gallons of filtered water, including labor, cost of wash and waste water, lost sand, sanitary analysis of water chemicals, superintendence, watchmen, ordinary repairs, and all incident expenses, but excluding interest, depreciation and cost of pumping water to filters," would be as follows:

Slow Sand Filers

Schuylkill River plants.....	$3 60 per million gallons
Delaware River—Torresdale.....	3 00 per million gallons

It is interesting to note that the actual cost on the above outlined basis for the filters for the past year was as follows:

Schuylkill River plants.....	$3 21 per million gallons
Delaware River—Torresdale.....	1 82 per million gallons

Also, their estimate of the cost of pumping water to the filters at Torresdale is almost exactly the same as the actual amount expended for this work last year.

Typhoid Fever

The following table shows the number of cases of typhoid fever and deaths in Philadelphia during the past ten years. It is most gratifying to notice the very marked decrease in this disease, due to the completion of the various filter plants and the introduction of filtered water.

Year.	Cases typhoid fever.	Deaths from typhoid fever.	Typhoid fever death rate per 100,000 of population.
1901	3,669	444	33.7
1902	5,006	588	43.8
1903	8,701	957	70.1
1904	6,587	744	53.5
1905	6,450	684	48.3
1906	9,721	1,063	73.8
1907	6,762	890	60.6
1908	3,502	533	35.7
1909	2,336	331	21.8
1910	1,745	270	17.4

Of the cases and deaths reported for 1910, 134 cases were contracted during the vacation period at our nearby ocean resorts; 60 were secondary cases or those contracted directly from the patient, and 258 others, or a total of 452 cases, were directly traceable to outside causes.

The daily average consumption for the year was 314,331,000 gallons, and this represents, when the day pumpage is taken into account, the limit of the Bureau, not only in pumps and filters, but in pipes as well.

It is only by the exercise of the utmost care that the present supply is maintained, and while the pressure is good in many parts of the City, it is not so in the lower and western center of the City.

It is possible with the expenditure of not less than ten million dollars to enlarge the Torresdale Filters and Pumping Station, also the Lardner's Point Pumping Station, as well as the mains conveying water from Lardner's Point to South Philadelphia. Funds, however, are not available, and even if they were the time required to build these additional works would be so long that it will not be possible, at the present rate of consumption, to provide for the natural growth of the City. Philadelphia to-day is the only important City that has forbidden the selling of water by measurement, and we still charge the man who wastes more water than a dozen others will use the same price that we do the careful and conservative citizen, who takes enough interest in life to have his plumbing repaired, or his spigots turned off when not in use.

Our filter plants, pumping stations and distribution system are ample to give a much better service than we are now providing, to a population 50 per cent. larger than we have at present, if meters were installed on the establishments of large consumers and those whom we know to be wasting water.

Such a course will not at first increase the revenue, but it will decrease our operating expenses, and make it possible to give everyone a good supply of clear water and at a good pressure.

We have hundreds of cases where the water charges provided by the Schedule of Rates and our regulations work a decided hardship to the consumer, and result in the small manufacturer paying more water rent proportionately than the large one.

The Bureau has had introduced in Councils the following ordinance to remedy the defects noted above, but without result, and I respectfully recommend that Councils be again petitioned to allow the Bureau to place meters under these or similar conditions:

"AN ORDINANCE

"Authorizing the Department of Public Works (Bureau of Water) to place meters on certain premises using City water, and charge meter rates for water used on such premises, and repealing all ordinances inconsistent herewith.

"SECTION 1. *The Select and Common Councils of the City of Philadelphia do ordain,* That the Department of Public Works (Bureau of Water) is hereby authorized and empowered to place meters on all premises where City water is consumed when formally requested by the owner or owners thereof, or upon any premises except private dwellings where, in the judgment of the Chief of the Bureau of Water, there is an excessive use of water.

"SECT. 2. Charges shall be made for all water metered at the rate provided by Ordinance approved July 27, 1901.

"SECT. 3. All meters installed by authority of the Department of Public Works (Bureau of Water) and not requested by the owner or owners of the premises, shall be placed at the expense of and remain the property of the City. No rental shall be charged the consumer for the use of the meter, but the consumer shall be held responsible for the safe keeping of the meter or meters, and shall pay for any damage thereto other than from ordinary wear and tear, or from injury by fire.

"SECT. 4. All meters installed by the Department of Public Works (Bureau of Water), at the request of the owner or owners of the premises upon which said meters are installed shall be paid for by the owner or owners of said premises. No meter or meters shall be removed unless approved by the Chief of the Bureau of Water. The City reserves the right at any time, or at all times, to remove any meter or meters for testing purposes.

"SECT. 5. All ordinances or so much of ordinances inconsistent herewith be and the same are hereby repealed."

The water rent and inspection division of the Bureau has been placed in charge of a registrar, and the organization is in excellent condition, and compares favorably with that found in the largest business establishments. The volume of business done is large, and it has been so systematized that it is mutually beneficial to the City and the water consumers.

Consumption.

The consumption of water during 1910 was 114,730,900,447 gallons, an increase of 3,034,723,538 over that of 1909. The average daily consumption was 314,331,234 gallons, an increase of 8,300,000 gallons per day. The per capita rate was 203.2 gallons.

The average daily pumpage of the Bureau was 551,800,000 gallons, divided as follows:

	Gals. per day.
Pumpage into distribution	314,800,000
High service pumpage	8,000,000
Low service pumpage	229,000,000

The increase of pumpage over the amount consumed is due to the low lift or double pumpage at the Torresdale and Upper Roxborough filters and by the High Service Pumping Station.

The average daily pumpage from the pumping stations was as follows:

	Gallons.
Lardner's Point	206,100,000
Belmont	42,700,000
Queen Lane	38,700,000
Roxborough	27,000,000
Total	314,500,000

Of the above quantity, 65 per cent. was pumped from the Delaware river, and 35 per cent. from the Schuylkill river, and 88 per cent. of the total supply was filtered.

The total quantity of water filtered during the year was 98,503,400,000 gallons, divided as follows:

	Gallons.
Torresdale	75,910,490,000
Belmont	14,107,971,000
Upper Roxborough	5,067,849,000
Lower Roxborough	3,417,040,000
Total	98,503,350,000

Revenue Collected.

The revenue collected from all sources amounted to $4,586,884.65, exceeding that of the preceding year by $133,920.97.

The total collections during 1910, and the amounts for the several items, as compared with those of the preceding year, were as follows:

	1909	1910	Increase	Decrease
Water rents	$3,829,119 06	$3,972,300 56	$143,181 50	
Meter rents	396,016 79	416,279 42	20,262 63	
Frontage	104,046 54	50,555 51		$53,491 03
Collected by City Solicitor	36,099 64	32,866 81		3,052 83
Penalties	41,588 88	44,490 75	2,901 87	
New connections	24,118 00	17,103 10		7,014 90
Searches	2,523 50	2,557 50	34 00	
Miscellaneous	7,061 78	40,099 97	33,038 19	
Old material, Department of Supplies	4,215 49	884 03		3,331,46
Ferrules, Highway Bureau	8,174 00	9,567 00	1,393 00	
Totals	$4,452,963 68	$4,586,884 65	$200,811 19	$66,890 22
			66,890 22	
Net increased collections, 1910			$133,920 97

Total	$2,734,183 83

Number of warrants drawn for maintenance	2,584
Number of warrants drawn from loans	808
Number of employees, December 31, 1910	1,970

Expenditures.

Maintenance:

Salary and pumping station pay rolls	$486,933 65
Buildings, grounds and reservoirs pay rolls	334,538 99
District and improvement pay rolls	333,858 57
Bureau shop rolls	36,700 11
Hydrographic corps	1,596 00
Filtration pay rolls	238,170 65
Supplies from direct appropriations	46,060 28
Total	$1,477,858 25
Materials furnished by Department of Supplies	883,006 75
Total cost of maintenance	$2,360,865 00

Improvements:

Total expenditures on account of improvement and filtration contracts	$1,255,525 58
Total expenditures	$3,616,390 58

Total Expenditures.

Total expenditures for maintenance and construction, including amounts expended for improvements and the extension and filtration of the water supply, from 1799 to December 31, 1910.	$94,247,395 85

Total Earnings of the Bureau of Water.

Total revenue from water rents, etc., from the installation of the water works in 1799 to December 31, 1910	$112,546,950 28

Net Profit Earned by the Bureau of Water.

Net profit earned by the Bureau of Water from the installation of the works in 1799 to December 31, 1910	$18,299,554 43

This does not include cost of collection, 1887 to 1910.

Bonds for the Improvement, Extension and Filtration of the Philadelphia Water Supply, January, 1911.

Date of Ordinance.	Total Loan	Amount for Water	Amount for Filtration	Per Cent. Rate Interest
April 1, 1890	$4,600,000	$645,000		3
September 16, 1892	1,000,000	1,000,000		3
February 6, 1893	3,500,000	1,000,000		4
April 3, 1894	3,000,000	360,000		3½
June 18, 1895	1,200,000	960,000		3
June 17, 1898	11,200,000		$3,700,000	$8,400,000 at 3 1,400,000 at 3½
March 15, 1900	12,000,000		12,000,000	3,000,000 at 3 9,000,000 at 3½
June 11, 1902	5,000,000		1,300,000	3½
May 18, 1904	16,000,000		5,000,000	3½
February 9, 1907	13,500,000	500,000	4,000,000	6,000,000 at 4 125,000 at 3½
June 30, 1908	10,000,000		800,000	
July 19, 1909	3,539,700		725,000	
		$4,465,000	$27,525,000	
			4,465,000	
Total for water and filtration			$31,990,000	

In addition to the above $500,000 was appropriated by Councils December 29, 1902, from the current funds, making the total amount appropriated for filtration, $28,025,000.

Of the funds appropriated directly for the improvement, extension and filtration of the water supply the following amounts have been expended or charged off on account of pending contracts:

Paid on completed contracts	$22,276,849 83
Paid on uncompleted contracts	1,408,384 05
Limits of uncompleted contracts, less payments	263,115 95
Land damages	876,435 55
Expenses, supplies, advertisements, etc	435,729 16

Inspections	$24,514 94
Salaries and wages	1,571,639 60
Expended by Water Bureau	1,013,149 89
Damages to property on account of pipe laying	18,876 55
Repaving over pipe trenches	100,053 99
Available balances on hand	36,250 49
Total	$28,025,000 00

Land Appropriated.

The land appropriated for filters and other works comprises 471.738 acres, divided as shown below. Under the caption "Land Damages" is included the jurors' and experts' fees, and other legal expenses incident to the land takings.

Section.	Acres Appropriated.	Land Damages and Costs.
Upper Roxborough	34.578	$78,768.66
Shawmont Pumping Station (account Bureau of Water)	2.800	16,810.13
Belmont	60.572	351,664.39
Torresdale	343.500	323,737.18
Lardner's Point	9.525	40,250.21
Oak Lane	20.823	65,204.98
Total		$876,435 55

Coal.

The total quantity of coal consumed at the several pumping stations and filter plants during the year was 210,263 tons, costing $618,381.35, a decrease over the amount used in 1909 of 4,693 tons, and a decrease in cost of coal used of $11,523.86.

With this lower coal consumption there were pumped 6,934,000,000 gallons more water than during 1909.

The regular pumping stations used a total of 173,863

tons, 4,087 tons less than in 1909, and pumped 114,939,000,000 gallons, an excess of 3,830,000,000 gallons over 1909.

The High Service Stations burned 4,705 tons of coal during the year, an excess of 163 tons over that of 1909, and pumped 300,000,000 gallons less water. This lower pumpage was due to the abandonment of the Mt. Airy Pumping Station, and a change in the district supplied from the Frankford High Service Station.

The Low Service Stations pumped 83,600,000,000 gallons, 3,426,000,000 gallons more than in 1909, and burned 30,439 tons of coal, 1,872 tons less than in the preceding year.

The increase and decrease in the consumption of coal, and the corresponding increase or decrease of pumpage at the several pumping stations as compared with the preceding year, was as follows:

STATIONS	Coal—Tons.		Pumpage—M. Gals.	
	Increase.	Decrease.	Increase.	Decrease.
Fairmount				876
Spring Garden		7,036		3,456
Belmont	1,768		1,336	
Queen Lane	3,998		3,679	
Shawmont		4,914		222

Average	6.41	77.62	15.96	0.84	12391	

Pumping Stations.

Lardner's Point.

The cost of operating the Lardner's Point Pumping Station, including all labor, coal, supplies and repairs, was $444,460.55, divided as follows:

House No. 1	$33,544 75
House No. 2	218,461 73
House No. 3	192,454 07

The cost of pumping a million gallons of water 100 feet high in House No. 2 was $2.99, proportioned as follows:

Labor, $1.49; coal, $1.31; oil, packing and supplies, $0.19.

The same service cost in House No. 3, $2.45 per million gallons 100 feet high, divided as follows: Labor, $0.98; coal, $1.05; oil, packing and supplies, $0.16.

The difference in cost is represented largely by most of the auxiliaries being in House No. 2 and more of the administrative expenses are charged to it.

The six engines in House No. 2, and the three in House No. 3, operate with an average lift of 206 feet, while the other three engines in House No. 3 work under a lift of 250 feet.

The total pumpage at the station for the year was 75,229,360,000 gallons, divided as follows:

	Gallons.
House No. 1	582,000,000
House No. 2	35,524,300,000
House No. 3	39,123,000,000

The increase in total pumpage for 1910 over that of 1909 was 3,340,000,000 gallons.

The average daily pumpage was 206,100,000 gallons.

The quantity of coal consumed was 73,202 tons, costing $192,713.98, an increase of 2,097 tons over that used in 1909, which was due to the increased amount of water pumped and to coal lost by two fires in the bunkers.

The station is in excellent condition, and it is a sight that cannot be seen in any other pumping station in the world when the twelve 20-million gallon Holly vertical engines are all at work at one time, and it is our misfortune that that is often necessary.

The six 20-million gallon Holly vertical, triple-expansion engines in House No. 3 were tested in the latter part of 1909 and the first half of this year, and the duty obtained, per 1,000 pounds of steam, was as follows:

	Per cent.
Engine No. 11—173,695,000 ft. lbs., exceeds guarantee....	10
Engine No. 12—175,054,000 ft. lbs., exceeds guarantee....	1.8
Engine No. 13—178,138,000 ft. lbs., exceeds guarantee....	14.9
Engine No. 14—181,211,000 ft. lbs., exceeds guarantee....	16.9
Engine No. 15—177,200,500 ft. lbs., exceeds guarantee....	14.3
Engine No. 16—173,222,000 ft. lbs., exceeds guarantee....	11.8

The above engines have been in constant service and are giving perfect satisfaction.

Torresdale.

The Torresdale Pumping Station is a low service plant, pumping water from the Delaware river to the preliminary filters.

The station contains the following machinery:

Six R. D. Wood 40-million gallon centrifugal pumps, driven by compound vertical engines.

One Allis-Chalmers 40-million gallon centrifugal pump, driven by a compound vertical Bates engine.

One De Laval 50-million gallon centrifugal pump, driven by turbine engine.

Three 150 K. W. generators, driven by De Laval turbine engines.

Two 5-million gallon De Laval centrifugal pumps, driven by turbine engines, for preliminary filter wash water.

One 2.5-million gallon De Laval centrifugal pump, turbine engine driven, furnishing water under 100 lbs. pressure for sand washing.

One 3-million gallon Worthington compound duplex pump, for emergency use for sand washing.

The total cost of operating the station for the past year, including all labor, coal, supplies, repairs, etc., was $165,-109.63, or $2.10 per million gallons of water pumped to the filters, and the average cost of raising one million gallons 100 feet high, based on the pumpage of the large centrifugal pumps, was $5.01, divided as follows: Labor $2.52; coal, $2.07; oil, packing and sundries, $0.42. The average lift was 42 feet.

The above costs include furnishing current for operating the four 80-H. P. motors connected to the air blowers in the pre-filters, and lighting all the filters and grounds, heating the pre-filter buildings, and operating the wash water pumps, besides the regular auxiliaries of a station of this size.

The total pumpage for the year was 78,529,360,000 gallons, an increase of 3,340,000,000 gallons over that of 1909, and, owing to the very excellent manner in which the station was operated, at a lower coal consumption than for the previous year.

The average daily pumpage was 215,000,000 gallons.

The six R. D. Wood & Co.'s centrifugal pumps and engines are still in the hands of the contractor and are being operated under his direction.

The 50-million gallon DeLaval turbine driven centrifugal pump, on a daily test gave a duty of 104,000,000 foot pounds per 1,000 pounds of steam, and the unit is in regular operation.

The total quantity of coal used was 25,590 tons, and cost $68,217.06, a decrease in the amount of coal consumed over that of 1909 of 2,542 tons.

Fairmount and Spring Garden.

Both the Fairmount and Spring Garden Stations have been out of service during the past year, and are in the hands of caretakers, awaiting such disposition as may be made of them in the future.

Belmont.

The total pumpage at the Belmont Station was 15,581,123,852 gallons by meter measurement, an increase of 1,336,341,304 gallons, or over 4 per cent. more than that pumped during the preceding year.

The average daily pumpage was 42,688,010 gallons, an increase of 3,661,208 gallons per day.

The total cost of operating the station, including all labor, supplies and repairs, was $250,315.06 for the year.

There were used 39,842 tons of coal, costing $126,697.56.

The average lift was 298.7 feet, and the total cost of operating the station was $5.39 per million gallons 100 feet high, divided as follows: Labor, $2.15; coal, $2.74; oil, packing and sundries, $0.50.

The consumption of coal increased 1,768 tons, but notwithstanding this fact there was a decrease of 4.5 per cent. in the coal consumed per unit of work performed.

Nos. 5 and 7 engines have undergone extensive repairs and have been equipped with new pump chambers, made in accordance with plans designed in this Bureau. These chambers show no signs of stress, strains or working, and in these respects are a very great improvement on the original design.

No. 6 pump is receiving similar attention, with the exception that only two chambers are defective and are to be replaced with new ones. The repairs to this engine are about 45 per cent. completed.

The two 10-million gallon horizontal cross-compound pumps, erected by the Bethlehem Steel Company, were tested on March 18th and a duty was obtained of 136,657,500 foot pounds for No. 1 engine, and 135,395,000 foot pounds for No. 2 engine per 1,000 pounds of dry steam, exceeding their guaranteed duty by 3.53 and 2.57 per cent.,

respectively. These engines have been in constant service all year and are giving satisfaction.

Queen Lane.

The total cost of operating this station, including all labor, coal, supplies and repairs (including the re-building of engines Nos. 1, 2 and 3), was $169,277.62 for the year 1910, representing $4.69 for each million gallons raised 100 feet high, divided as follows: Labor, $2.03; coal, $2.33; oil, packing and sundries, $0.33.

The average lift was 255.9 feet.

The total pumpage was 14,105,922,500 gallons by meter measurement, an increase of 3,679,377,500 gallons, or 26 per cent. over 1909.

The average daily pumpage was 38,700,000 gallons.

The quantity of coal consumed was 25,098 tons, costing $84,078.30, an increase of 4,000 tons over that of 1909. Due to the increased pumpage, there is, as a matter of fact, however, an increasd efficiency shown of 12 per cent. due to the improvement effected in engines Nos. 1 and 2, and the better operation of the station.

The work of rebuilding engine No. 1 in accordance with plans made in this Bureau was completed and the engine put into service August 11th. This engine has since been in continuous operation, and engine No. 2, which was similarly reconstructed during 1909, has likewise been in service throughout the year. Both these pumps work satisfactorily and are greatly improved.

The rebuilding of engine No. 3 in a similar manner is in progress, and the work thereon about 65 per cent. completed.

The average "slip" on the engines at this station, as determined by the plunger displacement and by meter measurement, was 3 per cent. as compared with 4.72 per cent. in 1909.

Shawmont.

The total cost of operating the Shawmont Pumping Station for the year 1910, including all labor, coal, supplies and repairs, was $212,883.10, or at the rate of $5.44 per million gallons pumped 100 feet high, divided as follows: Labor, $2.39; coal, $2.57; oil, packing and sundries, $0.50.

The average lift was 397.4 feet.

The total pumpage by meter measurement was 9,841,201,837 gallons, a decrease of 222,959,081 gallons, due to the increased efficiency of the pumps and to meter measurements, more than to any reduction in consumption.

The average daily pumpage was 27,000,000 gallons.

The quantity of coal consumed was 13,380 tons of pea coal and 20,088 tons of bituminous coal, costing $99,903.75, a decrease of 4,914 in tons, and $14,692.86 in value over that used in 1909.

No. 5 engine was thoroughly overhauled and is in good condition.

No. 6 engine is undergoing similar repairs and is about 75 per cent. completed.

Nos. 8 and 9 engines, horizontal, cross-compound, 5,000,000 gallon capacity, built by The Snow Steam Pump Works, were tested on March 26th and a duty obtained of 141,446,000 foot pounds for No. 8 and 144,240,000 foot pounds for No. 9, per 1,000 pounds of dry steam, exceeding the guaranteed duty by 4.77 and 6.84 per cent., respectively.

High Service Stations.

The total pumpage at the High Service Stations was 2,901,832,140 gallons, a decrease of 300,468,802 gallons.

The following table shows the pumpage at the several High Service Stations:

Stations.	Pumpage Gallons.	Increase Gallons.	Decrease Gallons.
Belmont	984,015,220	94,569,280	
Roxborough	1,504,157,400		279,967,500
Mt. Airy	3,412,500		65,355,987
Frankford	410,247,020		49,714,595
Totals	2,901,832,140	94,569,280	395,038 082
			94,569,280
Decrease			300,463,802

Mt. Airy Pumping Station was shut down June 9, and such pumpage as was required from this station will hereafter be furnished from the Roxborough High Service Station.

The Chestnut Hill Station has been dismantled and the grounds and buildings turned into a playground for children.

At the Roxborough High Service Station an extension has been made to the boiler room, in which two steam boilers, taken from the Spring Garden Works, have been installed.

The work in connection with the installation of these boilers and the building of the extension to the boiler house was done by employees of the Bureau, and it is now about 90 per cent. completed.

Roxborough Low Service Station.

The total pumpage at this station was 5,067,849,000 gallons, an increase of 85,698,000 gallons.

Pumpage and Itemized Cost for 1910.

Stations	Pumpage.	Average Lift.	Labor.		Coal.		Oil, Grease and Waste.		Packing, Rubber, Valves, Etc.		Sundries.		Total Cost of Station.	Cost per M. G. 100 ft. High.	Averages, 1909.

*Meters. †Frankford, plus 275,000,000 gallons per month. ‡ Fairmount and Spring Garden, shut down February 15, 1909. Are kept in reserve.

Upper Roxborough Filters.

This station consists of a storage reservoir of 147,032,000 gallons capacity, giving a period of about 9.45 days' sedimentation, eight covered filter beds of a combined area of 5.6 acres and a covered clear water basin of 8,000,000 gallons capacity.

During the year there were filtered at this station 5,067,849,000 gallons of water, an average of 13,884,000 gallons per day, corresponding to an average rate of 2.479 million gallons per acre per day.

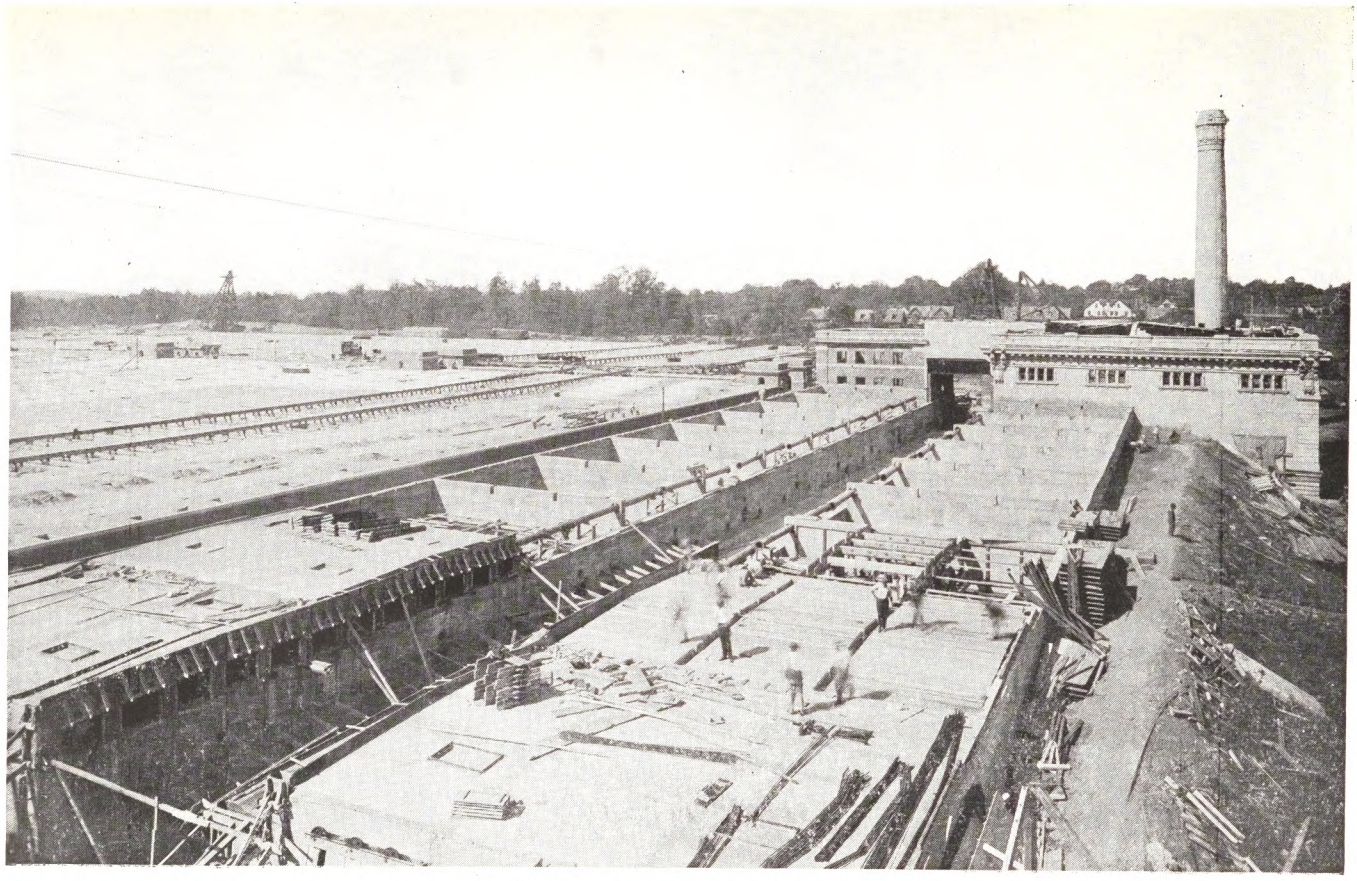
The total cost of operation was $15,656.96, or $3.09 per million gallons, of which the laboratory cost was 47 cents per million gallons filtered. This includes all the items connected with the operation of the station, but does not include the cost of pumping water from the storage reservoir or sedimentation basin to the filters.

Comparing the filtered water and the water flowing from the Upper Roxborough sedimentation reservoir, the reductions were as follows:

	Per cent.
Average reduction, turbidity	99.83
Average reduction, bacteria	99.30
Maximum reduction, turbidity	100.00
Maximum reduction, bacteria	99.86
Minimum reduction, turbidity	97.83
Minimum reduction, bacteria	89.09

Comparing the effluent from the filters with the water pumped from the Schuylkill river, the reductions were as follows:

	Per cent.
Average reduction, turbidity	99.93
Average reduction, bacteria	99.91
Maximum reduction, turbidity	100.00
Maximum reduction, bacteria	99.99
Minimum reduction, turbidity	94.44
Minimum reduction, bacteria	99.58



View of Queen Lane Filters.

The total number of runs or cleanings during the year was 62, an average of 7.75 runs to each filter, the average time between scrapings being 43.44 days. The average amount filtered between cleanings was 80.63 million gallons or, 115.183 million gallons per acre.

Three methods of washing were used during 1909 and their average runs were as follows:

Scraping and ejecting, 1909, 16 runs.....average 43.7 days each
Brooklyn method, 1909, 18 runs.....average 55.4 days each
Nichols separators, 1909, 31 runs.....average 41.6 days each

and the cost of labor and wash water was respectively 49 cents, 28 cents and 61 cents per million gallons of water filtered, or an average price of 48 cents.

The average amounts filtered between runs for the three above methods of washing were 90.2, 85.7 and 74.9 million gallons, and the wash water required was 2,200, 1,300 and 1,200 gallons per million gallons of water filtered, respectively.

This year but two methods were used, *i. e.*, the Brooklyn and Nichols, and the results were as follows:

Brooklyn method, 33 runs.....average 41.55 days each
Nichols separators, 29 runs.....average 45.60 days each

The cost of labor and wash water was respectively 65 cents and 98 cents per million gallons of water filtered, and the average amount filtered between cleanings was 113.5 and 117.0 million gallons per acre. The wash water required was 2,144 and 2,370 gallons per million gallons filtered, respectively.

The storage reservoir from which these filters are supplied is so large that the water was subsided for an average of 9.45 days before going upon the filters. The results obtained from this sedimentation are very good. The average turbidity of the water before being stored

was for the year 37, while the effluent from the reservoir averaged 14.

The percentage of reduction in turbidity was 61.2 per cent., and the reduction in bacteria from the above storage was 87.54 per cent. The maximum turbidity of the raw Schuylkill river water at the Roxborough station was 950, the minimum 5, and the average for the year 37.

The average bacteria in the Schuylkill river at Shawmont location of the pumping station supplying water to this plant was 77,800, the minimum 3,900, and the maximum 460,000.

Lower Roxborough Filters.

This station consists of a storage reservoir of 12,838,000 gallons capacity, giving a period of 1.59 days' sedimentation; five covered filter beds, having a combined area of 2.65 acres; eleven preliminary filter tanks, with a combined area of 0.2586 acres, and a covered clear water basin of 3,000,000 gallons capacity.

During the year there were filtered at this station 3,417,040,000 gallons of water, or a daily average of 9,362,000 gallons, corresponding to an average rate of 3.533 million gallons per acre per day. The filters were operated at rates between five and six million gallons per acre per twenty-fours hours.

The total cost of operation, including the preliminary filters but not including the cost of the wash water, was $16,478.73, or $4.82 per million gallons filtered, of which the laboratory cost was 69.6 cents per million gallons filtered.

The preliminary filters were operated at an average rate of 45,220,000 gallons per 24 hours per acre, at a total cost of $1.23 per million gallons of water filterd by the sand filters. The cost of labor and wash water was 68 cents,

replacing slag and furnishing new sponge cost 37 cents per million gallons. The average turbidity of the applied water for the year was 24, and the effluent averaged 12, the average reduction in turbidity being 51.4 per cent. The removal of bacteria by the preliminary filters for the year averaged 41 per cent.

The maximum quantity filtered by the sand filters in one day was 11,831,000 gallons, equivalent to a rate of 5.58 million gallons per day per acre of area in service. The filters were washed for the entire year by the "Brooklyn" method. The total number of runs or washings of the sand filters for the year was 65, an average of 13 per filter. The average time between scrapings was 25.19 days, and the average amount filtered between cleanings was 51.75 million gallons, equivalent to 97.65 million gallons per acre.

There was no resanding during the year.

Comparing the filtered water and the effluent from the preliminary filters, the reductions for the past year were as follows:

	Per cent.
Average reduction, turbidity	99.42
Average reduction, bacteria	98.80
Maximum reduction, turbidity	100.00
Maximum reduction, bacteria	99.93
Minimum reduction, turbidity	96.43
Minimum reduction, bacteria	95.78

In the following table a comparison is made, showing the reduction of the bacteria and turbidity in the water received from the Schuylkill river. This is the work of the combined plant, consisting of a sedimentation basin (where the water is allowed to stand for an average period of 1.59 days), preliminary filters and the final filters:

	Per cent.
Average reduction, turbidity	99.81
Average reduction, bacteria	99.58
Maximum reduction, turbidity	100.00
Maximum reduction, bacteria	100.00
Minimum reduction, turbidity	98.00
Minimum reduction, bacteria	98.00

Belmont Filters.

The Belmont Filter Station is composed of a sedimentation basin of 70,000,000 gallons capacity, giving a period of 1.8 days' sedimentation; preliminary filters consisting of nine filter tanks, having a capacity of 40,000,000 gallons per 24 hours; 18 covered sand filters, having a combined area of 13.23 acres, and a covered clear water basin with a capacity of 16,500,000 gallons.

The filters are operated at a nominal rate of 3,000,000 gallons per acre per 24 hours, and the total quantity filtered during the past year was 14,107,971,000 gallons, at an average yield of 38,652,000 gallons per day, corresponding to an average rate of 2.857 million gallons per acre per 24 hours.

The maximum amount of water filtered in any one day was 43,815,000 gallons, equivalent to a rate of 3.24 million gallons per acre per day of filters in service.

The preliminary filters were started on October 23, 1907. They were operated at a rate of 75,000,000 gallons per acre per 24 hours this year, and have materially increased the length of runs or time between scrapings of the slow sand filters without any decrease in efficiency.

The total cost of operation was $40,393.73, or $2.86 per million gallons filtered, which included a charge of $7,464.58 for operation of the preliminary filters and $3,336.99 for laboratory expenses, the cost of preliminary filtration being 53 cents per million gallons and the laboratory charge 24 cents per million gallons.

The reduction in turbidity and bacteria by the action of the preliminary filters was 50.14 per cent. and 44.5 per cent., respectively.

There were one hundred and fifty-six runs or cleanings during the year; one hundred and thirty-nine of these runs were on filters cleaned by the Brooklyn method and seventeen by the other methods.

The average length of runs was 40.58 days, the amount filtered between runs being 89,130,000 gallons, or 118,522,000 gallons per acre.

While the length of runs and quantity filtered with the Brooklyn method was not so large as with the usual method, it proved economical on account of the short time it was necessary to have the bed out of service, the low labor cost of cleaning and the saving in not having to replace the sand.

Sixteen filters were operated for the entire year by the Brooklyn method. The items of cost, etc., in the process of cleaning were as follows:

Number of runs	139
Average length of runs, days	41.1
Average m. g. filtered per run	91.25
Average m. g. filtered per acre per run	121.34
Average cost of water to wash per m. g. filtered	$0.05
Average cost of labor to wash and spade per m. g. filtered	0.44
Total cost of washing and spading sand in place (water and labor) per m. g. filtered	0.49
Average gallons water used to wash sand in place per m. g. filtered	3,480

One filter was cleaned by raking, spading and ejecting to the court in the usual manner for the entire year. The items of cost, etc., were as follows:

Number of runs	9
Average length of runs, days	39.05
Average m. g. filtered per run	87.63
Average m. g. filtered per acre per run	116.53

Average cubic yards sand scraped per m. g. filtered....	1.05
Average cost to scrape per m. g. filtered.....	$0.50
Average cost to remove per m. g. filtered.....	0.16
Average cost to wash per m. g. filtered.....	0.05
Average cost to scrape, remove and wash per m. g. filtered	0.71
Average cost to clean, including replacing sand, per m. g. filtered	0.99

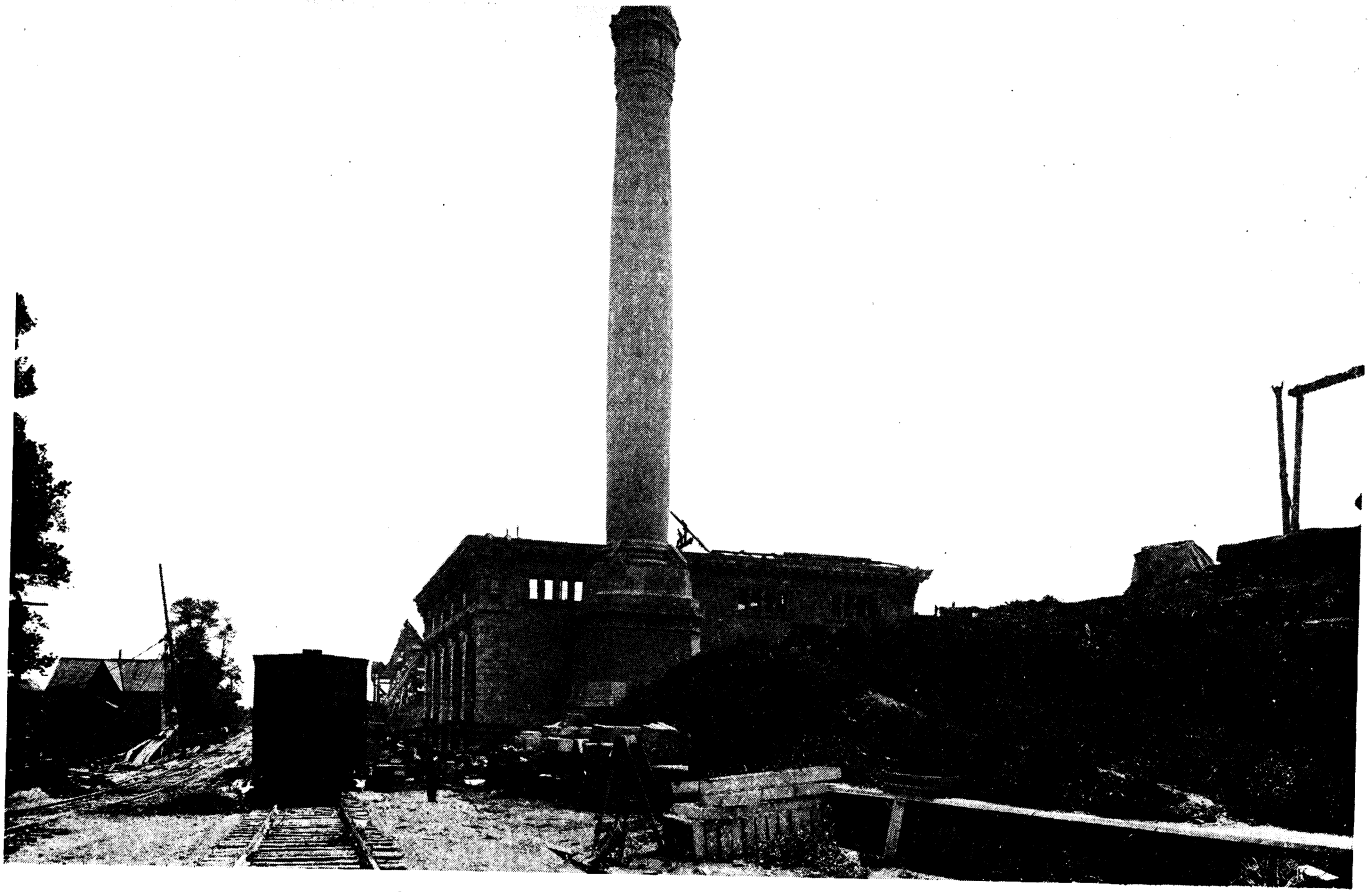
Another filter was operated during the year by the "Nichols Separators" method.

Number of runs	8
Average length of runs, days	28.04
Average m. g. filtered per run	58.52
Average m. g. filtered per acre per run.....	77.82
Average cost of labor, scraping, raking and spading per m. g.	$0.282
Average cost of washing per m. g. filtered.....	0.406
Average cost of water per m. g. filtered.....	0.03
Average cost per m. g. labor, spading, scraping, washing, water, etc.....	0.72
Average gallons water used to wash per m. g. filtered..	1,905
Depth of sand scraped per run.....	1.08
Cubic yards sand scraped per m. g. filtered.....	1.813
Daily average turbidity of applied water.....	11.00
Daily average bacteria in applied water.....	18,330

In filters Nos. 1, 2, 3, 7, 11 and 17, 1,430 cubic yards of sand were placed during the year by Bureau labor with the use of the Nichols separator, at a cost of 44 cents per cubic yard.

Comparing the effluent from the Belmont Filters with the applied water, the reductions were as follows:

	Per cent.
Average reduction, turbidity	99.39
Average reduction, bacteria	99.00
Maximum reduction, turbidity	100.00
Maximum reduction, bacteria	99.93
Minimum reduction, turbidity	94.44
Minimum reduction, bacteria	97.62



QUEEN LANE FILTERS.—Power House and Chimney.

Comparing the effluent of the plain sand filters and the water from the Schuylkill river, the reductions were as follows:

	Per cent.
Average reduction, turbidity	99.78
Average reduction, bacteria	99.64
Maximum reduction, turbidity	100.00
Maximum reduction, bacteria	99.97
Minimum reduction, turbidity	95.83
Minimum reduction, bacteria	98.43

During the year filtered water continued to be stored in the George's Hill Reservoir, which has a capacity of 39,760,000 gallons. This reservoir is not covered, and determinations made weekly failed to show any ill effects from this open storage.

A Blaisdell Filter Washing Machine installed in 1909 for cleaning the preliminary filters has been in operation for the entire year and has been of great benefit to the filters.

Torresdale Filters.

The Torresdale Filter Station consists of sixty-five 0.75 acre covered beds, a covered clear water basin of 50,000,000 gallons capacity, preliminary filter plant consisting of 120 concrete tanks, approximately 60 x 20 feet, and containing 1,140 square feet of filtering surface, with a capacity of 240,000,000 gallons of water per 24 hours; a low lift pumping station, containing eight 40,000,000 gallon centrifugal pumps; three 150 K. W. generators and four sand washing pumps, with full complement of boilers, economizers, mechanical stokers, etc.

The total amount of water filtered during the year was 75,910,490,000 gallons, an increase of 2,352,490,000 gallons over that of 1909. The daily average was 207,974,000 gallons, equivalent to an average rate of 4.18 million gallons per acre per day.

The entire cost of operation, not including the expenses

of the low lift pumping station, or the cost of the wash water, which are included in the expenses of the pumping station, and which amounted to $2.17 per million gallons of water filtered, was $138,194.20, or $1.82 per million gallons of water filtered, making the total expense of pumping the water from the river and filtering it $3.99 per million gallons filtered.

Of this amount $22,864.11 was for operating the preliminary filters and $14,183.33 the cost of the laboratory, or $0.30 and $0.186 per million gallons filtered.

The filters are operated at rates approximating 6,000,000 gallons per day per acre.

The maximum amount filtered in any one day was 229,000,000 gallons, equivalent to an average rate of 4.86 million gallons per acre per day for the area in service.

The total number of runs or cleanings was 651, a decrease of 189 over 1909, an average of about ten cleanings per filter per year, and an average length between cleanings of 33.65 days, an increase of 7.35 days over the previous years.

The average quantity filtered between runs was 113.97 million gallons, equivalent to 162.77 million gallons per acre per run.

The standard method of cleaning adopted for 1910 was washing the sand in the filters by ejectors and Nichols Separators, the cost of which was as follows:

Number of cleanings by Nichols method	558
Average length of runs, days	35.19
Average million gallons filtered per run	118.28
Average million gallons filtered per acre per run	144.53
Cost of water to wash per million gallons	$0.01
Cost to rake, scrape and wash per million gallons	0.65
Total cost to clean	0.66
Average gallons water used to wash per million gallons	2,027
Cubic yards scraped per million gallons filtered	1.67
Average turbidity of applied water	8.00
Average bacteria in applied water	2,220

At the beginning of the year, owing to the extreme, long-continued turbidity of the Delaware river water, and also the fact that nearly all the filters were operating at a comparatively high loss of head when the turbid condition of the water occurred, it was necessary, in order to keep the filters in service, to work a night force on cleaning filters for some time.

The filters were cleaned at this time in the usual manner, by scraping and ejecting and washing in the courts, and the costs, which were naturally high, are as follows:

Number of runs	93
Average length of runs	24.46
Average million gallons filtered per run	88.18
Average million gallons filtered per acre per run	105.21
Average cubic yards scraped per run	231.50
Average cubic yards scraped per million gallons filtered	2.63
Average cost to scrape per cubic yard of sand	$0.15
Average cost to remove and wash per cubic yard of sand	0.27
Average total cost per cubic yard, inc. water	0.43
Average total cost per m. g. to clean filters, inc. water.	1.14
Average total cost per m. g. to clean filters and replace sand, inc. water	1.80
Average gallons water used to remove and wash per cubic yard sand	2,850

There is quite a difference in cost between the two methods, but this was due largely to the circumstances; the work was done under emergency conditions continued night and day in extremely bad weather with turbid water that naturally shortened the amount filtered between cleanings.

The total cost of cleaning under emergency conditions was $1.80 per million gallons filtered while under normal conditions and water, the average cost for the year was but $0.66 per million gallons filtered.

The total cost of operating the entire filter station, including superintendence, supplies, repairs, cleaning, laboratory, pre-filters, lighting, wash water, but not the

low service pumping station, during September, 1910, was $1.39 per million gallons filtered, of which $0.30 was for preliminary filtration and $0.16 for the laboratory, and but $0.43 was for cleaning filters. The water previously and during this month was good, a large amount was filtered between cleanings and the cost was correspondingly low.

To guard against the trouble experienced at the beginning of the year, the filters after November 1st were cleaned in rotation and even with the water then applied, they would have filtered many million gallons more before it was necessary to put them out of service; in other words, the loss of head on all the filters was after that date kept low, so that when the period of turbid water occurred a large number of the filters would not go out of service at one time.

The resanding was done during the year by Bureau labor, using the Nichols Separators. Thirteen thousand seven hundred and seventeen cubic yards were replaced in filters Nos. 1, 7, 8, 13, 14, 16, 18, 25, 29, 32, 35, 38, 49 and 51, at a cost of 25¼ cents per cubic yard.

Comparing the effluent from the Torresdale final filters with the water taken from the Delaware river, the reductions were as follows:

	Per cent.
Average reduction, turbidity	99.12
Average reduction, bacteria	99.36
Maximum reduction, turbidity	100.00
Maximum reduction, bacteria	99.93
Minimum reduction, turbidity	95.45
Minimum reduction, bacteria	98.40

The Torresdale preliminary filters were placed in service on January 21, 1909, and since this date all water filtered by the sand filters has passed through these filters. They normally filter at the rate of 80,000,000 gallons per acre per day, but have given satisfactory results from

rates of 100,000,000 gallons per acre per day. The daily average reductions in turbidity and bacteria for the year were 67.4 and 68.5 per cent., respectively.

The average turbidity of the applied water to the pre-filters was 25 and the maximum 260. The per cent. of wash water used for the year averaged one per cent. of the amount filtered.

The number of cleanings for the pre-filters was 40,119, an average of 334 cleanings to each filter, or about 1.1 days between cleanings for the year.

The total amount pre-filtered was 77,781 million gallons, requiring 778 million gallons of wash water.

Cost of Operation of Filters for 1910.

The following appendices accompany this report:

A—Report of Chief Clerk.

B—Report of General Superintendent.

C—Report of Assistant in Charge of Distribution.

D—Report of Registrar.

E—Report of Superintendent of Construction and Repair Shop.

F—Report of Chief Draughtsman.

Distribution.

The total quantity of pipe laid was 137,242 feet of which 125,819 feet were service mains from 4 to 16 inches in diameter, 3,988 feet pumping and supply mains from 12 to 48 inches in diameter, in addition to which 7,435 feet of pipe were laid for fire hydrants and other connections.

The total length of new pipe laid was 134,364 feet, equal to 25.45 miles, making in addition to that previously laid 1,637.60 miles now in use.

Of the above 14.24 miles were laid by private contract on account of the Bureau being without pipe and having no funds with which it could be purchased.

The total number of additional fire hydrants put in during the year was 727, making the total number in use 16,288. Of these 694 are on the High Pressure Fire Service and are under the jurisdiction of the Bureau of Fire.

The total number of drills for attachments, from one-half to six inches in diameter, was 9,887.

The total number of meters in use was 1,895.

The total number of dwellings with water was 315,326, an increase of 12,404 during the year.

I wish here to testify to the faithful and valuable services rendered the City by the employees of the Bureau, and it was only by their efforts that the supply of water, both as to quality and quantity, was maintained sufficiently to meet the demand.

Thanking you for the valuable assistance and support given me, I am,

Very respectfully yours,

FRED. C. DUNLAP,

Chief of Bureau.

APPENDIX A

REPORT OF CHIEF CLERK

Philadelphia, January 18, 1911.

FRED. C. DUNLAP,
Chief, Bureau of Water.

DEAR SIR:—I have the honor to submit, herewith, detailed statement of the expenditures of the Bureau for the year 1910.

Yours respectfully,

J. T. HICKMAN,
Chief Clerk.

Detailed Expenditures of Bureau for 1910.

General appropriation.	Amount appropriated.	Amount expended.	Amount merging.	Amount not merging.
An ordinance to make an appropriation to the Bureau of Water, approved December 31, 1909	$961,791 06			
Balance from books of 1909	1,647,340 90			
Increased by additional appropriations	563,800 00			
	$3,172,931 90			
Diminished by transfer	66,695 08			
Net appropriation		$3,106,236 82		
Item 1—Salaries	$532,195 00			
Diminished by transfer	59,111 65			
Net appropriation to item		473,083 35		
Chief of Bureau		$10,000 00		
Chief Clerk and assistants		4,875 00		
Stenographers		2,700 00		
Correspondence clerk		1,000 00		
Time clerk		1,000 00		
Messenger		720 00		
Draughtsmen		5,014 83		
Superintendent and assistant		5,000 00		
Clerk and paymaster and assistant		2,178 49		
Clerks		2,620 94		
Assistants to Chief		6,299 19		
Superintendents of filters		2,499 96		
Chemists and assistants		5,440 00		
Bacteriologists		3,000 00		
Assistant clerks		3,609 00		
Pipe inspector and clerk		2,500 00		
Search clerk		1,300 00		
Chief inspector		1,200 60		
Inspector		17,991 87		
Permit clerk and assistant		2,500 00		
Purveyors		10,197 03		
Purveyors' clerks		6,272 82		
Purveyors' assistant clerks		5,162 34		
Yardkeeper		852 37		
Hydrant inspectors		7,567 79		
General foremen		8,150 10		
Foremen of repairs		7,650 00		
Superintendent of shop and clerk		2,400 00		
Stop attendants		2,933 34		
General storekeeper		866 67		
Foreman machinist		2,000 00		
Foreman bricklayer		1,600 00		
Foreman, City shop		1,396 23		
Foreman carpenter		1,176 67		
Foreman plumber		1,000 00		
Foreman stonemason		333 32		
Foreman painter		1,000 00		
Foreman rigger and assistant		1,897 58		
Watchmen		6,084 26		
Janitor, main office		720 00		
Lineman		1,200 00		
Telephone operators		1,600 00		
Laboratory assistant		720 00		
Registrar		1,200 00		

Detailed Expenditures of Bureau for 1910—Continued.

General appropriation.	Amount appropriated.	Amount expended.	Amount merging.	Amount not merging.
Item 1—Continued.				
Salaries at stations:				
Fairmount		$8,173 50		
Spring Garden		14,654 16		
Belmont		50,084 89		
Belmont High Service		6,712 57		
Queen Lane		20,118 07		
Shawmont		44,853 16

APPENDIX B

REPORT

OF THE

GENERAL SUPERINTENDENT

SUBMITTING

TABLES OF EXPENSES, PUMPAGE AND CONSUMPTION OF WATER DURING 1910

Philadelphia, January 18, 1911.

FRED. C. DUNLAP, ESQ.,
Chief, Bureau of Water.

DEAR SIR:—I respectfully submit the following report on the operations and the expenses in connection with the work performed at the several pumping stations during 1910:

During the past year the pumpage from the Schuylkill river has increased from 39 to 42 billion gallons, and that from the Delaware river from 72 to 75.2 billion gallons.

From the two rivers 6.4 billion gallons more water was pumped than during the preceding year.

The price of coal averaged one cent per ton more than that purchased in 1909, and the total quantity consumed was 864 tons less than that of the preceding year.

The pumpage at the high service stations averaged 823,200 gallons less per day than that during 1909. This

reduction was due to a decrease in the area supplied from the Roxborough and the Wentz Farm High Service Stations, and to the discontinuance of pumpage at the Mt. Airy Station, which was put out of commission June 11, 1910.

The following tables show the several items of expenditures and the details of pumpage, etc., all of which are respectfully submitted.

Very respectfully yours,

ALLEN J. FULLER,
General Superintendent.

DESCRIPTION OF STEAM BOILERS, BUREAU OF WATER, PHILADELPHIA, 1910.

PUMPING STATION.	TYPE OF BOILERS.	STEAM BOILERS.																		
		Number of Boilers.	Diameter of Shell (inches).	Length of Shell (feet).	Thickness of Shell (inches).	Number of Flues.	Diameter of Flues (inches).	Thickness of Flues (inches).	Length of Flues (feet).	Number of Tubes.	Length of Tubes (feet).	Diameter of Tubes (inches).	Diameter of Steam Drum (inches).	Length of Steam Drum (feet).	Length of Grate (feet).	Area of Grate (square feet).	Area of Heating Surface (square feet).	Estimated Horse-power, at 10 square feet for Shell and Fire Flues, 15 square feet for Tubes and 12 square feet for Drums.	Height of Stack (feet).	Section of Stack (square feet).

DESCRIPTION OF PUMPING MACHINERY OF THE BUREAU OF WATER PHILADELPHIA, 1910

STEAM ENGINES AND PUMPS.

PUMPING STATION.	Designated Number of Engine or Turbine	TYPES OF ENGINES.	Designated Capacity—Million Gallons per Day.	High Pressure Cylinder.						Int. Pressure Cylinder.						Low Pressure Cylinder.						Air Pumps.						Forcing Pumps.																					
				Number of Cylinders.	Bore (inches).	Stroke (feet).	Number of Revolutions.	Speed (feet per minute).	Diameter of Rod (inches).	Number of Cylinders.	Bore (inches).	Stroke (feet).	Number of Revolutions.	Speed (feet per minute).	Diameter of Rod (inches).	Number of Cylinders.	Bore (inches).	Stroke (feet).	Number of Revolutions.	Speed (feet per minute),	Diameter of Rod (inches).	Number of Air Pumps.	Bore (inches).	Stroke (feet).	Number of Revolutions.	Diameter of Rod (inches).	Type—Single [S] or Double [D].	Type—Single [S], Double [D], Triple [T], Bucket [B], Plunger [P].	Number of Pumps.	Bore (inches).	Area (square inches), A.	Stroke (feet).	Number of single strokes per minute	Diameter of Pump Rod (inches).	Gallons Displaced per Revolution (Theoretical).	Gallons Displaced per Revolution (Actual).	Diameter Suction Pipe (inches).	Diameter Discharge Pipe (inches).	Number of Suction Valves (on each end).	Lift of Suction Valves (inches).	Area of Suction Valves (square inches).	Number of Discharge Valves.	Lift of Discharge Valves (inches).	Total Area, B (square inches).	Relative Speed, of Water, A, B (through Valves).	Speed (feet per second) through Valves.	Mean Pressure on Pumps at Pressure Gauge (pounds per square inch).	Corresponding Head (feet).	Lift (feet) from Surface of Water to Centre of Gauge.	Total Lift (feet)

PUMPAGE DIAGRAM FOR THE YEAR 1910.

APPENDIX C

REPORT

OF THE

ASSISTANT IN CHARGE OF DISTRIBUTION

Philadelphia, January 1, 1911.

FRED C. DUNLAP, ESQ.,
Chief, Bureau of Water.

SIR:—I have the honor to submit the following report on the distribution system for the year 1910:

Mains.

The following is a statement of the mains laid, relaid, taken up, etc.:

New Work.

	Feet.
Service mains laid	125,819
Supply mains laid	3,988
Pumping mains laid	.....
Connections, etc.	7,435
Total	137,242

Comparison of Conditions Relative to the Distribution, 1909-1910.

	1910.	1909.	Increase.	Decrease.
Service mains, 4 inches to 16 inches	125,819	125,195	624	
Supply mains, 16 inches to 48 inches	3,988	4,853		865
Pumping mains, 12 inches to 48 inches		109		109
Connections and miscellaneous work	7,435	7,022	413	
Totals in feet	137,242	137,179	1,037	974

Of the 125,819 feet of service mains laid, 50,599 feet were laid by the City, for which $1.00 per foot was charged against each property owner fronting thereon, and 75,220 feet were laid by private contract under Ordinance of April 12, 1909, which requires no payment to the City by those paying their pro rata share of the cost of laying the pipe, but against those not joining in the expense of laying the pipe, the usual charge of $1.00 per foot front is made.

	1910.	1909.	Increase.	Decrease.
Relaid, 3 inches to 30 inches	4,630	11,170		6,540
Miscellaneous repairs, 3 inches to 48 inches	4,592	3,977	615	
Taken up, 3 inches to 48 inches	3,221	8,326		5,105
Lowered, raised and shifted, 4 inches to 48 inches	2,908	7,345		4,437
Totals in feet	15,351	30,818	615	16,082
Pipe cut off and abandoned, 3 inches to 20 inches	4,287	4,631		344

Repairs.

	Feet.	Feet.
Mains relaid	4,630	
Repairs and connections	4,592	
		9,222
Old pipe taken up	3,221	
Pipe lowered, raised and shifted	2,908	
		6,129
Total		15,351

Abandoned.

	Feet.
Three inch	37
Four inch	1,507
Six inch	1,984
Eight inch	505
Twelve inch	254
Total	4,287

The total quantity of pipe handled for all purposes throughout the year was 152,593 feet, weighing 6,372,385 pounds.

The total quantity of new pipe laid was 134,364 feet, 25.45 miles, making, in addition to that previously laid, 1,637.60 miles now in use.

Fire Hydrants.

New style fire hydrants in new locations	775
New style fire hydrants in place of old style	407
Total	1,182
New style fire hydrants taken out	47
Old style fire hydrants taken out	1
Total	48

The total number of new style fire hydrants added to the distribution system was 727, and the total number in use December 31, 1910, was 16,288, of which 365 are of the old style, and 15,923, or 97.7 per cent., of the new pattern. Of this latter number, 694 are installed on the High Pressure Fire Service System.

Drills for Attachments.

	Number of openings.	Area, square inches.
One-half inch	8,920	1,750
Five-eighths inch	548	168
Three-quarters inch	145	64
One inch	103	81
One and one-quarter inch	24	29
One and one-half inch	42	74
Two inches	66	207
Three inches	12	85
Four inches	12	151
Six inches	15	424
Totals	9,887	3,033

Tabulations of work performed and of expenditures made are also submitted herewith, together with various other tables, complied as in previous years.

The report of the pipe inspector relative to the inspection of pipe and other castings during the year, in tabulated form, also accompanies this report.

In closing I desire to give full credit to the assistance rendered this Bureau by Dr. William C. Robinson, Chemist, Bureau of Health. From time to time during the year Dr. Robinson made chemical analyses of samples of water

submitted to him, thus enabling us to determine the source of leaks reported to the Bureau of Water by various property owners throughout the City.

Respectfully submitted,

W. WHITBY,

Assistant in Charge of Distribution.

SERVICE AND SUPPLY MAINS LAID DURING 1910.

First District.

Comprising the 1st, 2nd, 3rd, 4th, 26th, 30th, 36th and 39th Wards.

	Purposes for which used.		Size in inches.						Total in feet and pounds.
			3	4	6	8	10	12	
New pipe or feet added.	Service mains				5,951	60	408	478	6,897
	Fire hydrant connections				898	813			1,711
	Supply connections (private)		18	116	11				145
	Total	Feet	18	116	6,860	873	408	478	8,753
		Pounds	270	2,320	226,380	36,666	22,440	35,850	323,926
Pipe used, but adding nothing to feet in ground.	Pipe relaid				16	408			424
	Repairs, general			3	161	13	30		207
	Pipe taken up			15	14				29
	Pipe raised						110		110
	Total	Feet		18	191	421	140		770
		Pounds		360	6,303	17,682	7,700		32,045
Total handled		Feet	18	134	7,051	1,294	548	478	9,523
		Pounds	270	2,680	232,683	54,348	30,140	35,850	355,971
Pipe cut off and abandoned				27	519				546

SECOND DISTRICT.

Comprising the 5th, 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th, 16th and 17th Wards.

	Purposes for which used.		Size in inches. 3	4	6	8	10	Total in feet and pounds.
New pipe or feet added.	Service mains				411			411
	Fire hydrant connections				125			125
	Fire connections (private)				36			36
	Supply connections (private)		202	68				270
	Total	Feet	202	68	572			842
		Pounds	3,030	1,360	18,876			23,266
Pipe used, but adding nothing to feet in ground.	Pipe relaid			21		501		522

APPENDIX D

REPORT OF THE REGISTRAR

Philadelphia, January 19, 1911.

MR. FRED. C. DUNLAP,
Chief, Bureau of Water.

SIR:—I herewith submit Annual Report of the operations of this Department for year ending December 31st, 1910.

The receipts from all sources for the year 1910 are as follows:

I. Collected by Water Rent Tax Office, Receiver of Taxes	$4,541,468 89
II. Collected for fees for searches, Miscellaneous Tax Office, Receiver of Taxes	2,557 50
III. Collected by City Solicitor for water pipe frontage	32,331 26
IV. Collected by City Solicitor for miscellaneous work done by the Bureau of Water	75 97
V. Collected by Department of Supplies for Bureau of Water	884 03
VI. Collected by Bureau of Highways for ferrules delivered by the Bureau of water	9,567 00
Total	$4,586,884 65

The revenue received by the Water Rent Tax Office for 1910, as compared with the receipts of 1909, shows an increase of $138,283.22.

The fees for searches received in the Miscellaneous Tax Office, Receiver of Taxes, for year 1910, show an increase of $34.00 as compared with year 1909.

The collections made by the Law Department to be credited to this Bureau for the year 1910 show a decrease of $2,457.79.

The amount received by the Department of Supplies for the sale of material shows a decrease of $3,331.46, as compared with year 1909.

The receipts of the Bureau of Highways for ferrules delivered by this Department on permits issued show an increase of $1,393.00 as compared with year 1909.

The total increase in revenue as compared with year 1909 amounts to $133,920.97.

I submit herewith detailed statements of receipts for years 1909 and 1910.

I forward herewith report of the operations of the Meter Department for year ending December 31, 1910; tables showing the number of shut off orders issued by this office for the collection of delinquent water rents; attachments made by purveyors in accordance with permits issued by this Department; shut offs made by permits; work done by District Purveyors without permits, including ferrules withdrawn for delinquent water rent, discontinued, leaking and abandoned ferrules; detailed accounts of permits issued for various purposes, together with the total number of premises and fixtures supplied by City water.

In closing, would state that the same standard of efficiency of the inspectors and clerks in this Department as was shown in the year 1909 has been maintained during 1910. The total number of permits issued by this Department for the year 1910 amounts to 23,128. With a corps of 23 inspectors the total number of inspections amounts to 54,382, as compared with 46,331 for year 1909.

Respectfully submitted,

JAMES F. McCRUDDEN,

Registrar.

1910.

APPENDIX E

REPORT

OF THE

OPERATIONS AT THE CONSTRUCTION AND REPAIR SHOP, BUREAU OF WATER, DURING THE YEAR 1910

Philadelphia, January 18, 1911.

MR. FRED. C. DUNLAP,
Chief, Bureau of Water.

DEAR SIR:—I herewith submit the annual report of the operations at the construction and repair shop, Twelfth and Reed streets, for the year ending December 31, 1910.

Yours respectfully,

JAS. H. DEAN,
Superintendent of Shop.

Annual Report of Superintendent of Bureau of Water, Construction and Repair Shop, for the year 1910.

APPENDIX F

REPORT

OF THE

CHIEF DRAUGHTSMAN

ON THE

HYDROGRAPHIC WORK

FOR THE YEAR 1910

Philadelphia, January 1, 1911.

FRED. C. DUNLAP, ESQ.,
Chief, Bureau of Water.

DEAR SIR:—The following report on hydrographic work under my charge, and on data collected during the year 1910, is respectfully submitted.

Rainfall observations at 20 stations, from which the Bureau obtained these data, have been carried on, completing 28 years of continuous records. Nine of these stations are maintained by the Bureau and furnished with instruments, stationery and postage. The observers are paid a small monthly salary for the services rendered.

Three of the stations are furnished with self-registering rain gauges, and at four stations automatic stream gauges are in operation, recording continuously the

height of water flowing in the streams. From the curves traced by these instruments the daily, monthly and yearly flow is computed.

The total observed precipitation for the year ending October 1, 1910, was slightly below the normal for the years during which these observations have been made.

The greatest monthly rainfall on the areas comprising the watersheds of the Schuylkill, Perkiomen, Neshaminy and Tohickon streams during the year was 6.41 inches, being the average of 17 stations for the month of April.

The precipitation for March, which was not much over one-half of an inch, was the smallest for the year. No very heavy rainfall, for short periods, occurred during the year.

Tables II, III and IV show the number of rainfalls and give the quantities exceeding .25 of an inch per hour at Philadelphia, Spring Mount on the Perkiomen, and forks of the Neshaminy, as recorded by the automatic gauges at these stations.

Stream flow observations with the automatic gauges have been continued on the Perkiomen, Neshaminy, Tohickon and Schuylkill, making 27 years of continuous records relative to stream flow on the three first-named streams, and 12 years on the Schuylkill river. Observations on the Wissahickon were subject to so much interruption that a continuous record for over one year was impossible, and the work on this stream was discontinued in 1906.

The automatic gauge at Fairmount records the height of water in Fairmount Dam from zero, City Datum, in feet and decimals of a foot, and records the height of water in inches on the dam above the old comb of the dam, which is given in the records of this Bureau as 4.76 C. D.

The zero of this gauge, as shown in the report for 1905, was compared with the City Datum bench marks established by the Bureau of Surveys on both sides of the river and was found to practically correspond with both.

Daily computations of the amount of water flowing over the flash boards were made from records of the automatic gauge, the known pumpage from the river, the quantity used for power through the wheels, the leakage and lockage (both estimated), which gives an approximation of the monthly flow of the Schuylkill river at Fairmount Dam.

A comparison of the inches of rainfall flowing off in the Schuylkill river, with the runoff in inches on the Perkiomen and Neshaminy creeks, is shown in the following table:

Inches of rainfall flowing off, January to December.	Perkiomen.	Neshaminy.	Schuylkill.
1898	21.50	22.22	24.39
1899	24.66	21.03	22.29
1900	15.21	17.27	18.23
1901	17.55	22.80	17.80
1902	29.01	30.74	29.02
1903	27.23	26.32	27.79
1904	23.07	23.37	18.84
1905	23.62	17.98	18.95
1906	21.67	24.41	17.31
1907	28.034	30.25	21.72
1908	18.708	20.307	17.096
1909	15.718	15.734	10.315
1910	16.923	18.666	12.262

At the present there is no method available by which the low water for periods of less than one month can be determined.

The daily average flow of the Schuylkill river as given in Table IX is computed from the total monthly flow, and is often, for several days at a time, much less than shown in the table.

With the exception of a few days in July, August and September, water was flowing over the flash boards of Fairmount Dam continuously from January 1st, which has not occurred before for many years, and was due to the partial abandonment of the river as a source of domestic supply since the completion of the filtration plant at Torrresdale.

The amount pumped by steam power at the Roxborough, Belmont and Queen Lane Pumping Stations was not much over 6,500 cubic feet per second, instead of 15,000 to 55,000 cubic feet per second, the variation being due to the use by the Fairmount Works of the water wheels for power.

During the past three years there has been a marked decrease in the flow of all the streams, due, first, to a slight decrease in the annual rainfall and, secondly, to the unequal distribution of the rainfall throughout the year; also to the unequal distribution over the area comprising the watersheds of all the streams in the eastern part of the State.

The following-named tables compiled as in previous years accompany the report:

I.	Monthly precipitation on sundry watersheds.	
II., III., IV.	Rainstorms exceeding ½ inch per hour	Philadelphia. Forks of Neshaminy. Spring Mount.
V., VI., VII.	Average rainfall flowing in Average annual yield of streams Comparative stream flow	Perkiomen. Neshaminy. Tohickon. Schuylkill.
IX.	Monthly and daily yield of	Perkiomen. Neshaminy. Tohickon. Schuylkill.

An examination of Table I, shows that the rainfall for February and March, months of least evaporation, was much below the monthly average for these months, while the rainfall for April, July and August, months of greatest evaporation, was much above the monthly average, very little of the rainfall reaching the streams.

These conditions combined to produce a low run off in the rivers, although the average rainfall for the year is but little below the average for the past 28 years.

Your attention is again respectfully directed to the value of this hydrographic work: First, in the length of time during which it has been continued, the year 1910 completing 28 years of records of rainfall and 27 of stream flow observations. Second, the very favorable conditions under which the observations have been continued for so long a period without any changes in the stream conditions at places selected for the location of the stream gauges, which would affect the original computed stream flow curves. Third, in the fact that the water sheds adjoin each other, thus making it possible that the records of stream flows can be combined to cover one large area on which the observations have been made consecutively, as on small areas the rainfall is much more evenly distributed. The runoff from the small area is also, in all probability, more nearly correct, and thus shows clearly the amount of water taken from the rainfall by evaporation and vegetation on the surface of the ground at different seasons of the year.

The Bureau is indebted to the following-named persons who have kindly furnished rainfall records:

Mr. John C. Beans, Moorestown, N. J.

Mr. Benjamin H. Shoemaker, Pennsylvania Hospital.

In order to secure uniformity in rainfall observations, the following notice was sent to the observers employed by the Bureau of Water at the beginning of the year 1890:

"To facilitate the work of the Hydrographic Corps, and maintain a uniform system of observations with the United States Weather Bureau, it is requested that you hereafter take rainfall observations at least once every day as near 8.00 P. M. as possible, recording the amount under that date as the rainfall of the preceding 24 hours."

Yours respectfully,

JOHN E. CODMAN

In Charge of Hydrographic Work.

TABLE II.

Rain Storms Exceeding in Rate 0.25 Inches per Hour as Recorded by the Automatic Rain Gauge at Philadelphia, for the Year 1910.

Date of Observation	Automatic Rain Gauge					Remarks
	Total Fall		Maximum Fall			
	Amount in Inches	Duration, Hours, Minutes.	Amount in Inches	Duration in Minutes	Rate per Hour During Maximum Fall	
April 20, shower	0.49	8—00	.23	10	1.38	
May 25, shower	0.70	3—45	.25	15	0.60	
June 9, rain storm	2.25	14—10	.75	60	0.60	
June 12, rain storm	0.80	20—35	.20	20	0.60	
June 18, shower	0.43	1—45	.35	8	2.63	
July 7, shower	0.40	1—00	.40	60	0.60	
August 4, shower	0.72	2—00	.67	15	2.68	
August 10, shower	0.38	8—15	.24	12	1.20	
August 19, shower	1.59	5—55	1.35	60	1.35	
August 26, shower	0.44	1—15	.40	20	1.20	
September 1, rain storm	1.58	20—45	.62	45	0.83	
September 4, shower	0.93	1—00	.84	15	2.56	
October 19 and 20, rain storm	2.17	11—45	.67	48	0.84	

TABLE III.

Rain Storms Exceeding in Rate 0.25 Inches per Hour as Recorded by the Automatic Rain Gauge at Forks of Neshaminy, for the Year 1910.

Date of Observation	Automatic Rain Gauge					Remarks
	Total Fall		Maximum Fall			
	Amount in Inches	Duration, Hours, Minutes.	Amount in Inches	Duration in Minutes	Rate per Hour During Maximum Fall	
April 17 and 18, rain storm	1,75	33—00	.30	40	0.45	
April 24 and 25, rain storm	1.60	20—40	.40	15	1.60	
April 25 and 26, rain storm	1.13	7—25	.48	30	0.96	
May 25, rain storm	1.26	2—45	.76	24	1.90	
June 9, rain storm	1.53	20—30	.25	40	0.37	
August 4, shower	1.39	1—20	1.35	40	2.02	
August 8, shower	1.15	10—00	.40	30	0.80	
August 10, shower	2.06	12—00	1.60	25	3.84	
August 26, shower	.35	3—00	.30	20	0.90	
September 1, rain storm	1.50	20—20	.30	60	0.30	
October 20, rain storm	2.62	11—30	1.00	20	3.00	
October 22, rain storm	0.50	7—10	.30	60	0.30	
December 23, rain storm	1.26	9—15	.21	20	0.63	

TABLE IV.

Rain Storms Exceeding in Rate 0.25 Inches per Hour as Recorded by the Automatic Rain Gauge at Spring Mount, for the Year 1910.

Date of Observation	Automatic Rain Gauge					Remarks
	Total Fall		Maximum Fall			
	Amount in Inches	Duration, Hours, Minutes.	Amount in Inches	Duration in Minutes	Rate per hour During Maximum Fall	
April 17 and 18, rain storm	1.99	34—15	.35	60	0.35	
April 24 and 25, rain storm	.75	17—20	.20	10	1.20	
May 20, rain storm	1.06	9—10	.20	15	0.80	
June 9, rain storm	0.95	7—30	.20	40	0.30	
June 10 and 11, rain storm	1.40	36—40	.32	12	1.60	
June 17, shower	1.30	2—15	.15	15	0.60	
June 18, shower	0.66	1— 5	.60	30	1.20	
July 16, rain storm	0.82	11—10	.47	25	1.13	
August 4, rain storm	0.58	2—10	.50	30	1.00	
August 8, rain storm	2.06	16—50	1.16	60	1.16	
August 10, rain storm	1.12	8—55	.60	30	1.20	
September 1, rain storm	1.48	18—50	.30	60	0.30	
October 22, rain storm	0.62	6—30	.35	60	0.35	

TABLE V.

Inches of Rainfall Flowing in the Perkiomen, Neshaminy and Tohickon Creeks.

Watersheds		Area in miles	Percentage of Total Area				Average for 27 Years—1883-1910.												
			Woodland	Cultivated	Flats	Roads	January	February	March	April	May	June	July	August	September	October	November	December	Annual
Perkiomen at Frederick, 27 years		152.	25	71	2	2	2.89	3.52	3.79	2.15	1.36	0.93	1.04	0.96	0.97	1.01	1.48	2.24	
Neshaminy below Falls, 27 years		139.3	6	92	¼	1¾	3.19	3.81	3.77	2.13	1.52	0.90	0.96	1.01	0.83	1.04	1.35	2.28	
Tohickon, 27 years		102.2	24	72	2	2	3.83	4.25	4.80	2.49	1.70	0.82	0.97	1.07	1.22	1.04	1.73	2.74
