#### REPORT

OF THE

#### WATERING COMMITTEE,

APPOINTED TO SUPERINTEND

## THE WATER WORKS.

becaut from Night to half way between Ele-

SINCE the last annual report, the log pond on Schuylkill has been rebuilt entirely with timber, in a substantial manner, but owing to the inequality and hardness of the bottom, where the logs had been sunk, and the ties not being fully secured, the water ebbs and flows in and out of the pond with the tides.—It is expected to be put in complete order before the frost setts in, the sum appropriated for that purpose being sufficient.

Agreeably to the resolution of Councils of the 14th September last, directing a new main pump barrel, cold water pump &c. to be provided for the lower Engine, the Committee directed the necessary provision to be made to carry the same into effect, and on examining the pump well, found there was sufficient room to introduce a ten inch pump for the cold water, constructed for a double stroke, instead of the single one contemplated, whereby double the quantity of water will be obtained, which, after feeding the cold water cistern, the surplus, together with the water pumped up by the main pump, will nearly supply the same quantity to the tunnel, as would be obtained by increasing the diameter of the pump barrel formerly proposed, which is impracticable from the contracted space of the well, and the expense thereof will not much exceed the sum appropriated by the Resolution. Your Committee have thought themselves warranted in adopting this plan, and have directed the models to be prepared, and the castings made, and they will be ready to replace the present main pump, whenever it may be necessary.

The duplicates of cranks, valves &c. having been used for both Engines, new ones must be provided, also a cast iron piston lid to the steam cylinder at the lower Engine, the one now in use being split.—The pump rod of said Engine is decaying—it is necessary to provide timber for a new one.

The coal vault proposed last year, claims the attention of Councils, the erecting of it ought not to be longer delayed, your Committee begs leave to refer you to their report of November 1808, on this subject.

The number of applications for a supply of the water into dwellings &c. in streets and alleys, where the distribution was not carried, has exceeded those of former years—your Committee, anxious to satisfy the public, and with a view to increase the rents, have been induced to lay down the chief part of the pipe on hand in the pond, for that purpose; and it being necessary to provide timber for the distribution and repairs for the ensuing season, they purchased a quantity of logs at a reduced price.

3400 feet of pipe have been laid this year—2230 feet have been expended in repairs, including the pipe laid in the middle of Chesnut from Ninth to half way between Eleventh and Twelfth streets, also over the culverts in Seventh and Eighth streets.—All the old pipe on the south side of Chesnut street, being oak and decayed, and those in Seventh and Eighth streets being under the foot pavement, were not worth the expense of taking them up.—The quantity of logs and pipe on hand, is about 1000 feet.

6000 feet of timber will be wanted for the stock of next year.

In proportion as the distribution is extended in the City, the repairs and expenses must necessarily increase, the estimate of the sum necessary for conducting the works the ensuing year is unavoidably augmented.

The receipts of the rents on	issuing	permits	this	vear	are:
------------------------------	---------	---------	------	------	------

1st,	quarter,	for 83 dw	ellings, ma	anufactories, &c. \$ 278 96

N. B. In statement of the cost of the Works exhibited in 1805, by a former Committee the sums charged to N. J. Roosevelt have been erroneously deducted, whereas the same amount for pumping the Water at Centre square, during six years and seven months due said Roosevelt, has not been noticed in the cost of the Works.
